IDENTIFIERS \*Texas

## ABSTRACT

These two documents include information about the students, student performance, staffing, and financing of public schools in Texas. The annual summary, in conjunction with the separately published "Texas Public School Statistics: Pocket Edition 1992-93," provides a detailed look at public education in Texas. "Supplement '93," which contains additional student performance information about testing in the spring of 1992-93, is available for the first time. "Snapshot '93" begins with an examination of state-level data and concludes with detailed information about each school district. The statistical highlights of the state section discuss administrative units, student performance, staff, and finances for the current year and include historical trends. The detailed statistics section summarizes 88 data items for groups of school districts categorized by size, by rural versus urban classification, and by tax effort, property wealth per pupil, and Education Service Center region. Performance of Texas public school students showed modest improvement in 1992-93, but data indicate that great disparities in performance among disadvantaged and ethnic minority students persist. "Snapshot '93" contains 26 exhibits and 257 pages of detailed statistics in tabular form. Five appendices contain: (1) item definitions; (2) data sources; (3) a bibliography; (4) end notes; and (5) school districts listed alphabetically. The supplement contains three exhibits and four summary tables (43 pages). (SLD)

# SNAPSHOT '93 - EVALUATION FORM

1. In what primary role do you use *Snapshot* data?

- ☐ school administrator      ☐ parent  
☐ teacher/educator      ☐ researcher  
☐ business person      ☐ legislator/state government  
☐ community leader/other policy maker  
☐ professional organization member  
☐ other

2. Please rate each section of *Snapshot* using the following scale:

|                   |           |         |         |                 |
|-------------------|-----------|---------|---------|-----------------|
| very<br>unhelpful | unhelpful | neutral | helpful | very<br>helpful |
| 1                 | 2         | 3       | 4       | 5               |

- ☐ *Statistical Highlights* (pp. 2 to 29)  
☐ Summary tables for District Size, Community Type, Tax Effort, Property Wealth and ESC Regions (pp. 32 to 49)  
☐ *Distribution Statistics* (pp. 50 to 55)  
☐ *District Detail* (pp. 56 to 289)  
☐ *Item Definitions* (pp. 290 to 297)  
☐ Other \_\_\_\_\_

3. Is there any additional information that you would like included in next year's *Snapshot*? \_\_\_\_\_

4. Is there any information that should be omitted from future editions of *Snapshot*? \_\_\_\_\_

5. What one improvement would you most like to see in *Snapshot*? \_\_\_\_\_

Please use the following scale to respond to the statements below:

|                      |          |         |       |                   |
|----------------------|----------|---------|-------|-------------------|
| strongly<br>disagree | disagree | neutral | agree | strongly<br>agree |
| 1                    | 2        | 3       | 4     | 5                 |

6. The visual presentation of the material is good.  
 7. The organization of the book is good.  
 8. Finding information in the book is easy.  
 9. The information in *Snapshot* is useful.  
 10. The information presented is clear and easy to understand.  
 11. The quality of data is good.  
 12. The narrative and exhibits in the *Statistical Highlights* section provide an understandable overview of public education in Texas.  
 13. The level of detail in the *Statistical Highlights* section is adequate for my needs.  
 14. The level of detail in the *Detailed Statistics* section is adequate for my needs.

BEST COPY AVAILABLE

Fall 1993

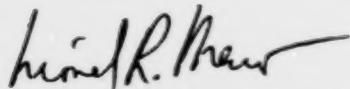

**Snapshot '93** is the sixth edition of this publication. It includes information about the students, student performance, staffing, and financing of public schools in Texas. This annual summary provides a means for all interested individuals to assess the progress of Texas toward excellence and equity in student achievement.

While performance of Texas public school students showed modest improvement during the 1992-93 school year, results indicate that great disparities in performance among disadvantaged and ethnic minority students persist. Educators must continue to address this challenge to reduce these gaps.

Due to changes in the student assessment program, students were tested in both the fall and spring of the 1992-93 school year. Fall results included in the Academic Excellence Indicator System reports are incorporated in this document. A supplement to this edition will present the spring results.

I encourage you to become familiar with the information contained in **Snapshot '93**. It is essential to understanding the climate in which Texas educators perform, the accomplishments they have achieved, and the efforts which they must continue to put forth to reach the goal of an excellent and equitable education for all our children.

Sincerely,

Lionel R. Meno  
Commissioner of Education

## ACKNOWLEDGMENTS

The preparation of this document and the related *Pocket Edition* would not have been possible without the assistance of many people. First, appreciation goes to staff of local school districts and regional Education Service Centers who compile and report the vast majority of the information contained in this publication. The quality of the data they provide directly affects the quality and usefulness of this document.

Next, many Texas Education Agency staff, while not part of the project staff, deserve credit for so freely contributing their time to this effort. These include Rick Battaile, Ester Calderon, Richard Dirkes-Jackes, Linda Hargrove, Shannon Housson, Alastair McKenzie, Rob Scott, and David Stamman; photographers Jack Brown and David Jacob for the cover photographs; and data processing staff in Technology Applications.

Thanks also go to the students and staff of Pease Elementary and Anderson High School of the Austin Independent School District for allowing us to use their photographs on the cover.

# Introduction

**Snapshot '93: 1992-93 School District Profiles** provides a detailed look at public education in the state of Texas for the 1992-93 school year. As diverse as the state itself, school districts in Texas exhibit extreme differences in almost every way: size, property wealth, student low-income status, and the ethnic composition of students and staff. **Snapshot '93** captures this diversity and provides readers with the basic information needed to assess the strengths and weaknesses of the various school systems.

Published annually since 1987-88, **Snapshot** presents a wide variety of information in a consistent format. Changes in this edition are minor; they reflect changes in the statewide student assessment program and in the statewide data collection system. This year only, a supplement to **Snapshot '93** is available which contains additional student performance information. An evaluation form, located just inside the front cover, provides an opportunity for readers to influence future editions.

## Document Organization

**Snapshot '93** begins with an examination of state level data and concludes with detailed information about each school district.

The state level section, *Statistical Highlights*, discusses the broad areas of administrative units, students, student performance, staff, and finances, and covers both the current year and historical trends. Graphic presentations are included in this section.

The *Detailed Statistics* section provides extensive school district level information on the same broad areas discussed in the *Highlights*. This section consists of three parts.

First, 88 data items are summarized for groups of school districts categorized by size, by a rural versus urban classification, by tax effort, by property wealth per pupil, and by Education Service Center (ESC) region.

Second, the distribution of these items is presented in tables showing their highest, lowest, and median values. In addition, values at the 1st, 5th, 10th, 25th, 75th, 90th, 95th, and 99th percentiles are shown. This section is labeled *Distribution Statistics*.

Third, individual district values for all data items are listed followed by a state summary. This section, titled *District Detail*, is in county name order with districts arranged alphabetically within each county.

**Snapshot '93** concludes with five appendices. Definitions of the 88 data items are arranged in numerical sequence by the number of the item in the *Item Definitions* appendix. The second appendix, *Data Sources*, lists the sources of data in alphabetical order by the abbreviated labels used throughout the document. Each major source of data is described and accompanied by a listing of associated data items and exhibits. A selected list of *Bibliographic Sources* follows in the third appendix.

*End Notes*, the fourth appendix, is intended to clarify terms that are not thoroughly addressed in other parts of the document. The final appendix lists school districts in alphabetical order by name. This appendix, *District Listing*, will help readers locate a particular district in the *District Detail* by relating the district name to the appropriate county.

## Overview of Data Sources

The vast majority of data in this document is reported to the Texas Education Agency (TEA) by school districts. The 1992 fall data collection of the Public Education Information Management System (PEIMS) is the primary source of data. Information obtained from the Property Tax Division of the Comptroller of Public Accounts (CPTD) for the 1992 calendar year and student test scores which are reported to the TEA by the testing companies are also incorporated.

Only one new item appears in this edition, number of campuses in the district. Except for a few items which have been dropped because they are no longer available, all other items also appeared in the 1991-92 edition. *Exhibit C* in the *End Notes* provides a crosswalk of prior to current year data items.

The 88 items span six pages, therefore a new set of districts is presented every sixth page. While some analysis of state and group level data is provided in the *Statistical Highlights*, the *District Detail* information is descriptive only. Readers should use discretion in drawing conclusions from the data presented.

# Statistical Highlights

## AGENCIES OF PUBLIC EDUCATION

### Central Education Agency

The Central Education Agency, composed of the commissioner of education, the State Board of Education (SBOE) and the TEA, guides and monitors public education in Texas.

The SBOE provides leadership and state level administration for Texas public education. The commissioner of education and the TEA staff work closely with the board to implement education policy.

The SBOE is comprised of 15 elected members representing various regions of the state, one of whom is appointed chair by the governor. In January 1993, Governor Ann Richards reappointed Dr. Carolyn Honea Crawford to a second two-year term as chair. A map showing 1992-93 SBOE district boundaries is included in the *End Notes*. This map reflects changes to the boundaries which were made as a result of redistricting in 1992.

The TEA, located in Austin, Texas, is the administrative unit of the Central Education Agency. Under the management of the commissioner of education, the TEA provides curriculum and technical assistance, accredits its school districts, operates research and information programs, monitors for compliance with federal and state guidelines, and serves as a fiscal agent for the distribution of state and federal funds. The TEA operational

costs are supported by both state and federal funds. In 1992-93 approximately 1,050 staff were employed at the TEA. Over half of all positions are funded with non-state dollars.

### Local School Districts

While the SBOE provides leadership for education, much of the control of public schools remains with the 1,048 local school districts. Districts serve students at one or more campuses in grades pre-kindergarten through twelve. There are almost 6,200 public school campuses in Texas, and approximately 60

percent of these serve students in the elementary grades.

*Exhibit 1* presents counts and enrollments for all campus types. Campuses are typed according to the range of grades they offer. *Exhibit B* in the *End Notes* provides more information about the grades offered in each of these categories.

Districts in Texas are classified according to governance structure and the ability to raise local revenue. The three types of districts are defined as follows:

**EXHIBIT 1**  
**Enrollment by Campus Type**

| Campus Type                     | Total Enrollment | # of Campuses | % of Campuses | Median Enrollment | Smallest to Largest |
|---------------------------------|------------------|---------------|---------------|-------------------|---------------------|
| High School                     | 883,566          | 1,126         | 18.2%         | 427               | 1 to 3,853          |
| Junior High School              | 197,212          | 294           | 4.8%          | 695               | 20 to 1,951         |
| Middle School                   | 551,301          | 849           | 13.7%         | 635               | 1 to 1,787          |
| Elementary School               | 1,839,083        | 3,481         | 56.3%         | 520               | 1 to 1,597          |
| Elementary & Secondary Combined | 64,580           | 434           | 7.0%          | 97                | 1 to 1,162          |
| State of Texas                  | 3,535,742        | 6,184         | 100.0%        | 504               | 1 to 3,853          |

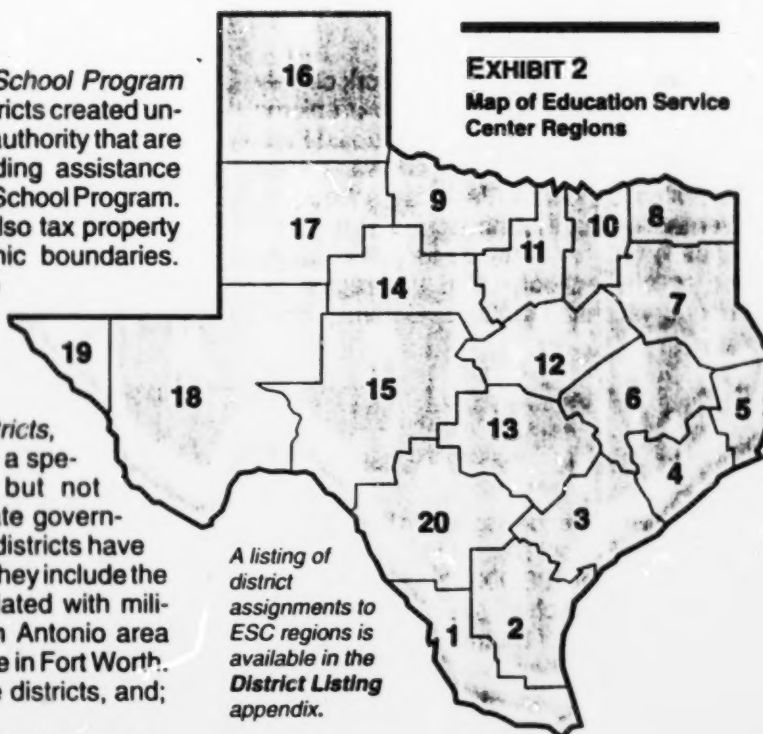

*Schools in Texas range in size from 1 to 3,853 students. Half of the campuses in the state have fewer than 504 students and half have more than this amount. Elementary schools make up 56 percent of all campuses in Texas and serve 52 percent of all students.*

- 1) *Regular Foundation School Program (FSP) Districts*, or districts created under general statutory authority that are eligible for state funding assistance under the Foundation School Program. These districts may also tax property within their geographic boundaries. Most districts fall into this category—1,042 or 99 percent in 1992-93;
- 2) *Special Statutory Districts*, or districts created by a special legislative act but not administered by a state government agency. These districts have no taxable property. They include the public schools associated with military bases in the San Antonio area and the Masonic Home in Fort Worth. There are six of these districts, and;
- 3) *State-Administered Districts*, or districts created by legislative act which are both funded and administered by a state government agency. Most of these 11 districts are administered by the Texas Department of Mental Health and Mental Retardation or the Texas Youth Council.

**Snapshot '93** includes data for the 1,048 regular FSP and special statutory districts only. State-administered districts do not have the same reporting requirements and are not included.

25

**EXHIBIT 2**  
Map of Education Service Center Regions

## Regional Education Service Centers

The 20 regional ESCs serve the school districts within defined geographic boundaries. Great disparity exists among the ESCs in terms of the number and characteristics of the districts they serve. However, all are expected to provide services that support improved student achievement in the districts within their boundaries. Specific emphasis is to be given to those campuses in the greatest need of support. *Exhibits 2 and 3* provide information about the locations and sizes of ESCs.

The service centers work closely with districts to provide technical assistance in the areas of accreditation and curriculum, professional staff development and administrator training, and the implementation of PEIMS. Service centers also provide schools with instructional media, data processing services, and assistance in

|                        |                     |                       |                     | Total .....          | 1,048               |

26

program improvement in areas such as bilingual education, special education, gifted and talented education, and programs for students in at-risk situations.

In 1992, Commissioner Lionel R. Meno continued funding to provide 60 field service agents, 20 Partnership Schools facilitators, and 20 regional certification officers to the

ESCs. The field service agents work closely with school districts to help solve problems related to student achievement. The 20 Partnership Schools facilitators work with the 83 Partnership Schools to facilitate school improvement at those campuses. The regional certification officers provide technical assistance to any school within the region on teacher certification matters. Commissioner

Meno approves services and budgets of ESCs, as well as performance contracts.

Statistics for all 88 items are summarized to the regional level in the *Detailed Statistics*. Additional information about the service centers is available in the *Biennial Report on Education Service Centers* published by the agency.

## STUDENTS

A predominant feature of the Texas public school system is its diversity, due in part to differences in geography, population density, and income level. Both student and district characteristics vary greatly across the state. To meet the challenge of educating all children, Texas public schools must successfully serve students whose primary language is not English, students who have special education needs, students who are in situations which put them at risk of dropping out, students who require instructional remediation, students who are gifted and talented, students who seek vocational rather than college preparatory course work, as well as students who thrive in a traditional classroom setting.

### Diversity

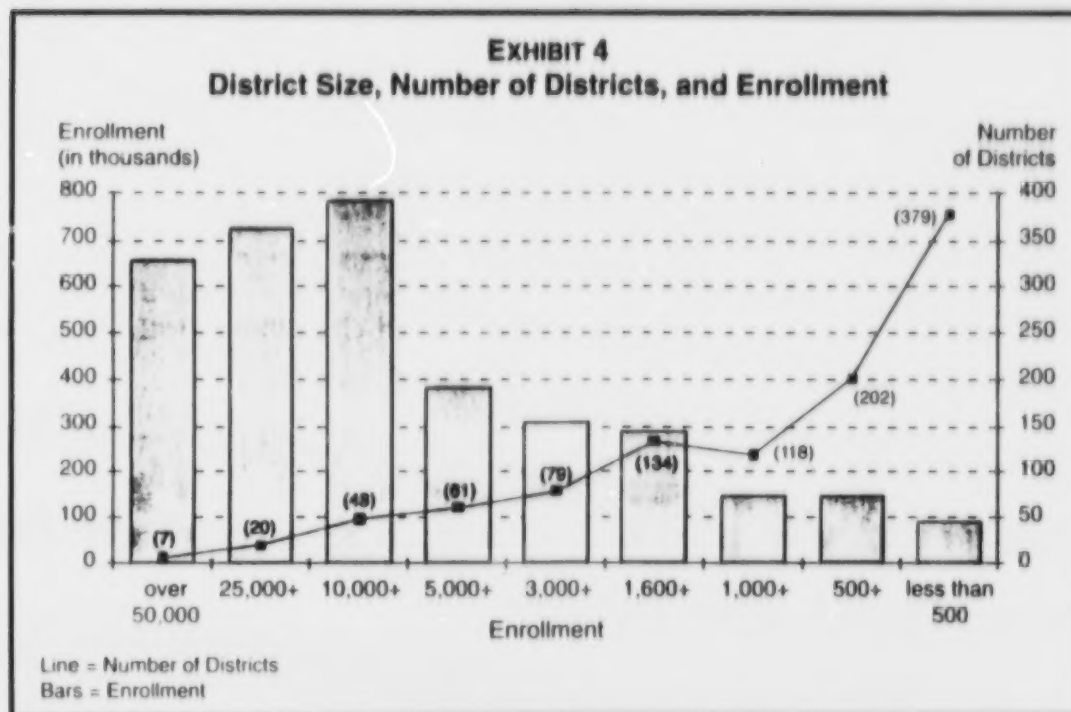

The 3.5 million public school students across Texas are served in markedly differing environments. For example, in 1992-93 only

seven students attended school in the Laureles Independent School District located in south Texas, while over 198,000 students received instruction at 250 school sites in the Houston Independent School District, the largest district in the state. The seven largest districts, those with over 50,000 students each, serve almost 19 percent of all public school students, while the smallest 379 districts, representing 36 percent of all districts, enroll less than three percent. The inverse relationship between the number of districts and the number of students enrolled is a defining characteristic of the Texas public school system. See Exhibits 4 and 5.

The ethnic distribution of students varies greatly across the state and appears to depend in part on geography and on the size of the district and type of community it serves. Statewide, approximately 52 percent of all students are minority. Districts in major urban

areas serve a 79 percent minority student population while districts in rural areas serve a population that is only 28 percent minority. The highest percentages of Hispanic students are found in the Edinburg ESC region at the southernmost tip of the state (94 percent), and in the El Paso region in far west Texas (80 percent). The largest percentage of African American students, 30 percent, is in the Beaumont region. The highest percentages of white students are found in the northern and eastern regions of the state.

The proportion of students with special needs also varies across the state. One indicator of need is the economic status of the child. Although Texas does not levy personal income taxes and has little information about family earnings, student eligibility to participate in the national free or reduced-price lunch program is one measure of student economic status. Approximately 44 percent

The seven largest districts have a combined enrollment of almost 660,000 students while the 379 smallest districts enroll fewer than 95,000.

of Texas public school children are eligible to participate in this program. Higher concentrations of economically disadvantaged students are found in major urban districts and in districts with higher percentages of minority students. The lowest percentages of economically disadvantaged students can be found in districts surrounding the major urban districts. As one would expect, the property

wealth of the district is strongly correlated with the economic status of the students it serves.

Student participation in special programs such as bilingual or vocational education differs by community type, district size, and geographic location. A greater percentage of students in rural districts are enrolled in vocational courses—19 percent—compared with 12

percent in major urban districts. By far, the highest percentages of students in bilingual or English as a Second Language (ESL) programs are enrolled in the Edinburg and El Paso service center regions with 37 percent and 23 percent limited-English speaking students, respectively. These figures are well above the state average of 10 percent.

### Student Population Growth

During 1992-93, the 1,048 regular and special statutory districts in Texas served 3,535,742 students in pre-kindergarten through grade 12. This number of students represents a 2.2 percent increase from the prior year, a slightly lower rate of growth than the 2.4 percent increase experienced between 1991 and 1992. Of the 1992-93 students, 83 percent were served the previous year and the remaining 17 percent were

**EXHIBIT 5**  
**District Enrollment**  
**at Selected Percentiles**

| Percentile      | Enrollment |              |
|-----------------|------------|--------------|
| 100th (Largest) | 198,013    | Houston ISD  |
| 95th            | 15,486     |              |
| 90th            | 5,975      |              |
| 75th            | 2,301      |              |
| 50th (Median)   | 817        |              |

| 0 (Smallest)    | 7          | Laureles ISD |

newly enrolled students, including those in pre-kindergarten and kindergarten programs.

Although the overall rate of growth was lower than in recent years, the number of districts reporting enrollment increases has grown. Almost 70 percent of the districts in the state reported enrollment increases in 1992-93, compared to 68 percent with increases in 1991-92, and 57 percent in 1990-91. As in 1992, districts in suburban areas around major urban and other central cities experienced higher rates of increase, over three percent for both, while major urban and rural districts averaged smaller increases, 0.8 percent and 1.8 percent, respectively.

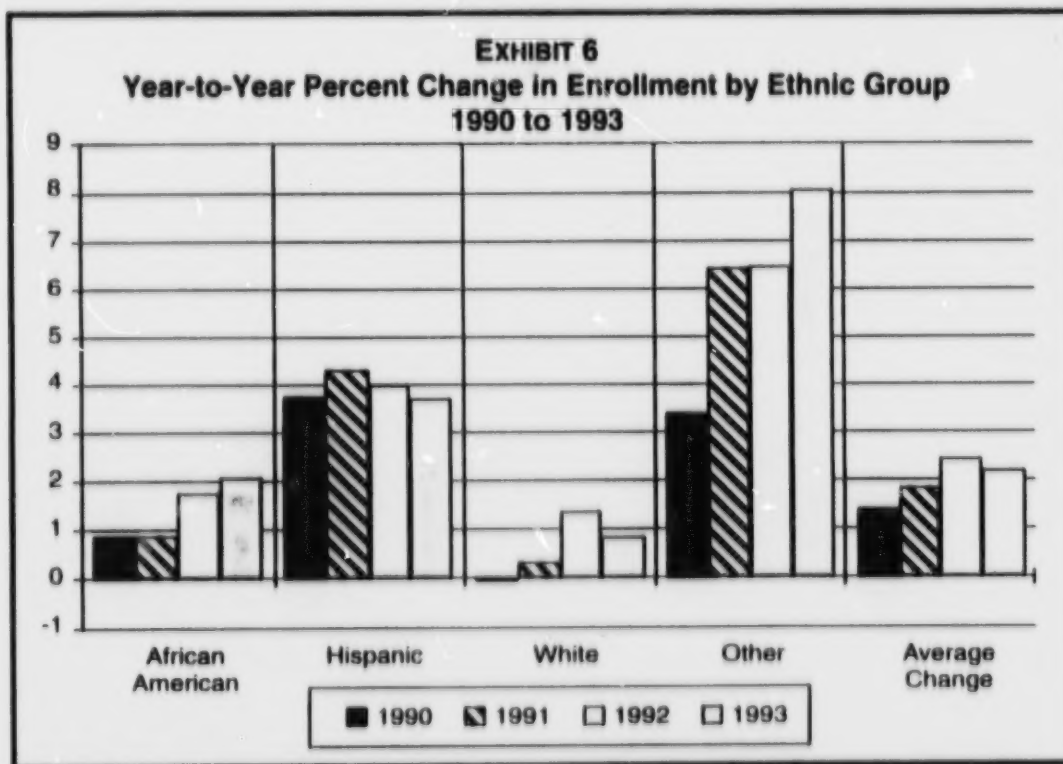

Statewide, growth in the minority student population continues to exceed non-minority growth. Minority students now comprise 51.6 percent of the population, compared with 51.0 percent in 1991-92. Growth in the minority student population was 3.5 percent, with the greatest increase, 8.1 percent, occurring in the Asian/Pacific Islander and native American populations. These populations, categorized in this document as "other," now account for 2.4 percent of all students. The number of African American students grew by 2.1 percent, representing a net increase of 10,230 students. African Americans comprise 14.3 percent of the total public school population as they did in 1992.

Although the Hispanic rate of growth, 3.7 percent, is not the highest among the ethnic groups, it is that population that continues to drive statewide growth. Of the 75,364 student

increase in Texas' total enrollment, 59 percent or 44,437 were Hispanic. Hispanic students now account for 34.9 percent of the total number of students.

In contrast, the white population grew by only 0.85 percent, or by 14,331 students. This rate

of increase is the smallest among the ethnic groups and it represents a decreasing rate of growth for this population. In 1992, white students increased by 1.35 percent. See *Exhibit 6*. The overall percent of white students in the total student population continues to drop; it has changed from 49.5 percent in

The average change in enrollment from 1992 to 1993 was 2.2 percent. Although the category of "other," containing Asian/Pacific Islanders and native American students, continues to exhibit the greatest percentage increase, it is the Hispanic population that is driving statewide growth. Of the 75,364 increase in Texas' total enrollment from 1992 to 1993, 59 percent were Hispanic.

1991, to 49.0 percent in 1992, to 48.4 percent this year.

## Growth by Grade Span

High growth experienced by elementary schools in past years is now reaching the state's middle schools. Enrollment in grades 6 through 8 increased by approximately 29,000 students, a gain of 3.7 percent over 1991-92. The greatest increase, five percent, occurred in grade 7. Early childhood enrollments continue to be high; early education, pre-kindergarten, and kindergarten grew by 3.6 percent. Growth in the middle grades and the three early childhood grades was the predominant factor in the overall 2.2 percent increase in enrollment.

Elementary growth in grades 1 through 5 was the lowest of all grade spans, at 1.1 percent. In fact, fewer students were enrolled in first grade in 1993 than in 1992.

High school enrollments were up 2.0 percent, the second consecutive year the total number of 9th through 12th graders increased. From 1988-89 through 1990-91, high school enrollment had declined slightly from year to year. Growth is due in part to larger student populations but also may reflect in-migration and successes in dropout prevention programs.

Other than pre-kindergarten and kindergarten, grades 1 and 9 have the largest percentage of students new to Texas public schools, 14.9 percent and 11.8 percent respectively. These grades are the traditional

entry points for students previously enrolled in private schools.

Each ethnic group displayed the same patterns of growth within grades as appear in the statewide patterns. Within each grade span, Hispanic students, native Americans, and Asians/Pacific Islanders have rates of growth that generally exceed the state average growth rate. African American growth exceeds the state average rate only in kindergarten and grades 8 and 9. Pre-kindergarten and early childhood education are the only grades where the growth rate for white students exceeds the state average rate.

On average, the pre-kindergarten and kindergarten grades have higher percentages of minority students, 60.3 percent, than the state (52 percent). Statutory requirements for pre-kindergarten education stipulate that limited English proficient (LEP) and/or economically disadvantaged pupils are to be identified and served. These characteristics are highly correlated with ethnicity in Texas. In grades 1 through 6, the ethnic distribution is virtually the same as the state, while the secondary grades (grades 7-12) have slightly more white students, 50.2 percent compared with 48.4 percent statewide.

## Retention

A strong predictor of future negative educational outcomes, such as dropping out of school, is whether or not a child has been retained in grade. Because of this relationship, recent legislation has required disclosure

of retention decisions. Beginning in 1992-93, districts reported the status of students at the end of the school year with regard to promotions or retentions. From these data it is possible to determine the number of students who moved to the next grade, and the number who will repeat a grade. For the first year of this collection, districts were asked to provide the year-end status for 1991-92 of their 1992-93 enrolled students. Analysis of the 1991-92 and 1992-93 student enrollment files supplemented the information on year-end status reported.

For 1992-93, there is not a definitive number of students being retained in grade because of the difficulty schools had determining the year-end status of new and transferred students; however, estimates have been calculated. Analysis shows that of the almost 3 million returning students in 1992-93, approximately 132,000, or 4.5 percent, were enrolled in the same grade as in 1991-92. Districts reported almost 31,000 other students would be repeating a grade in 1992-93. These probable 163,000 retainees represent 5.2 percent of the kindergarten through 12th grade enrollment.

Grade 9 had the highest percentage of retained students, with an apparent 15.8 percent repeating the grade. Grade 1 followed with 10.3 percent. Many districts operate a transitional first grade which requires spending two years in that grade before moving to grade 2. State Board of Education rule prohibits more than one retention in kindergarten through grade 4 and one in grades 5 through 8.

Texas retained students mirror the national profile. The majority of these students are ethnic minorities (68 percent) and are male. Most are young for their age; in every grade, the students born in June, July, and August are disproportionately represented among the total retainees.

Being retained in grade makes students over-age for grade unless they successfully complete an accelerated program to place them back with their on-grade-for-age schoolmates. Information on over-age students provides a glimpse of retentions in prior years. Over-age students cannot be unequivocally identified as prior retainees; some are students who intentionally entered school at an

older age. In 1992-93, over 5,300 newly enrolled students were already six years old when they started kindergarten.

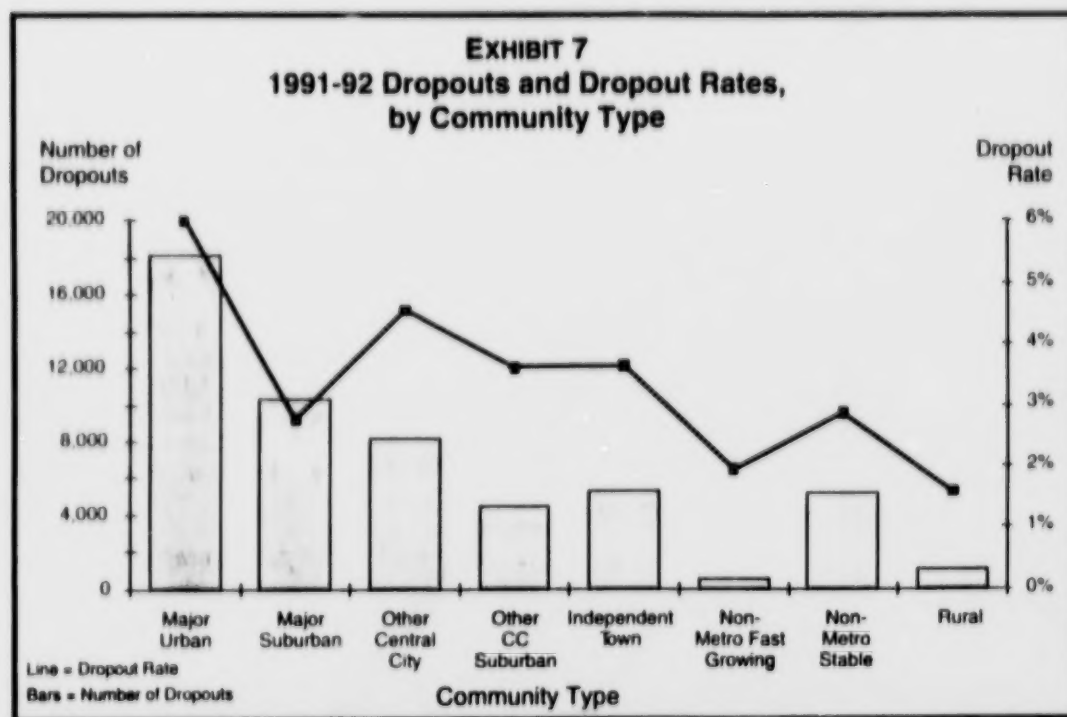

The percentage of over-age students has declined from 22 percent of all students in 1989-90 to 17.4 percent in 1992-93. The March 1990 adoption of the board rule limiting retentions, as well as heightened awareness of the long-term educational and psychological costs of retention, are likely contributors to the reduction.

In the future, information on student year-end status will be collected at the close of the school year which will allow more definitive profiles of retention to be presented in this and other publications.

## Dropouts

School districts reported a total of 53,420 dropouts in grades 7 through 12 for the 1991-92 school year, representing an annual statewide dropout rate of 3.8 percent. This rate is only one-tenth of a percent smaller than the rate calculated for the 1990-91 year, indicating that the reporting of these data is stabilizing. Prior to this year, reductions of 15 to 23 percent occurred each year in the number of dropouts reported.

By applying this annual rate of 3.8 percent to each grade total in grades 7 through 12, the estimated longitudinal dropout rate is calculated as 20.7 percent. This implies that for every 1,000 students enrolled in the 7th grade

*In 1991-92, 34 percent of all dropouts were concentrated in the 10 districts classified as major urban. Although the number of reported dropouts has decreased dramatically, the pattern of dropout rates and counts reflected in this exhibit has been stable since the collection of dropout information began in 1987-88.*

## EXHIBIT 8

## 1991-92 Dropouts by Grade Level for Selected Student Characteristics

| Grade Level | Total Dropouts | Male   | Female | Special Education | Economically Disadvantaged | Not on Grade |
|-------------|----------------|--------|--------|-------------------|----------------------------|--------------|
| 7th         | 2,056          | 1,061  | 995    | 200               | 905                        | 1,143        |
| 8th         | 3,511          | 1,734  | 1,777  | 386               | 1,503                      | 2,277        |
| 9th         | 16,058         | 9,074  | 6,984  | 1,727             | 5,420                      | 14,082       |
| 10th        | 12,518         | 6,997  | 5,521  | 1,188             | 3,602                      | 10,707       |
| 11th        | 10,210         | 5,415  | 4,795  | 772               | 2,331                      | 7,947        |
| 12th        | 9,067          | 4,760  | 4,307  | 585               | 1,853                      | 5,430        |
| TOTAL       | 53,420         | 29,041 | 24,379 | 4,858             | 15,614                     | 41,586       |

*The typical dropout is male, is older than his classmates, and is in the 9th grade when he leaves school. Seventy-eight percent of the students who dropped out were over-age for their grade, indicating they were retained one or more times over their school careers.*

in 1992-93, only 793 would be enrolled in the 12th grade five years later.

Urban districts and districts with high percentages of minority students have the highest dropout rates. *Exhibit 7* depicts the relationship between community type and dropout rates.

More males (54 percent) than females dropped out, although there is some variation in the distribution by sex within grade level. Across grades, the highest percentage of male dropouts occurs in the 9th grade with 56.5 percent. For females the highest percentage occurs in

grade 8, where they account for 50.6 percent of the dropouts.

Among all dropouts, 68 percent dropped out during the regular school year and the remainder dropped out during the summer break. Thirty percent of all reported dropouts were in the 9th grade. It appears that the first year of high school can be overwhelming to the student who is marginally prepared academically. Eighty-eight percent of the 9th graders who dropped out were over-age for their grade.

It is estimated based on students' birth dates that 78 percent of all dropouts were at least

one grade level behind in school, indicating they were retained one or more times over their school careers. See *Exhibit 8*.

Minority ethnic groups are disproportionately represented among dropouts. Almost half of the reported dropouts were Hispanic, one-third were white, and over 17 percent were African American.

Annual dropout rates by ethnic group reflect this representation. Among the Asian/Pacific Islander and native American population of 7th through 12th graders, 2.9 percent dropped out. For white students that figure was 2.5 percent; for African Americans, 4.8 percent; and for Hispanics, 5.5 percent.

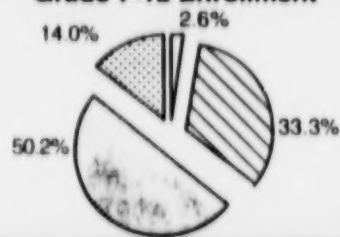

## Graduates

During the 1991-92 school year 158,242 seniors graduated from Texas public schools. Of the total graduates, 10,290 were identified as special education students. The graduation rates presented in the *District Detail* section and in exhibits are computed using non-special education students only. The graduation rate for the class of '92 was 92.2 percent, a drop of three and a half percentage points from the 95.7 percent rate reported for the class of '91. Part of this decline is due to the requirement that 1991-92 graduates pass the Texas Assessment of Academic Skills (TAAS) test in order to graduate. Approximately 3,500 students of the class of '92 who had met all other requirements did not graduate because they did not pass the exit-level TAAS. In addition, the dropout rate for 12th

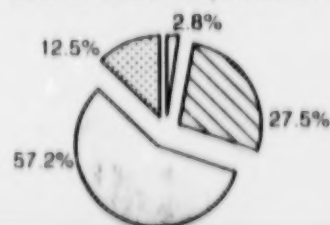

### EXHIBIT 9 Student Populations by Ethnic Group

#### Grade 7-12 Enrollment

#### High School Graduates (Class of 1992)

#### 1991-92 Dropouts

□ Other   □ White   ▨ Hispanic   ▩ African American

Although minority students account for about half the student population in grades 7-12, they are under-represented among the graduates (43 percent) and over-represented among the dropouts (67 percent).

graders increased slightly between 1991 and 1992, from 4.6 percent to 5.1 percent, leading to speculation that a number of students gave up and dropped out prior to their last opportunity to attempt the test. It is probable that some of these students enroll in General Educational Development (GED) programs and later earn their certificate of high school equivalency, although at this point it is not possible to determine how many dropouts later earn their credentials through alternate routes.

Statewide, white students accounted for 57.2 percent of all graduates, Hispanic students, 27.5 percent, African American students, 12.5 percent, and other students, 2.8 percent. Refer to Exhibit 9 for a breakdown of the ethnicities

of the total 7th through 12th grade student population compared with graduates and dropouts.

From a longitudinal perspective, the total number of graduates in 1991-92 (including special education graduates) is 64.2 percent of all 7th graders enrolled in 1986-87. This is a decline from the previous year when 64.9 percent of 1985-86 enrolled 7th graders graduated. The majority of the over 88,000 students lost between the 7th and 12th grades are dropouts; a small percentage are students who did not pass the exit-level state assessment. GED completion notwithstanding, the high percentages of non-graduates raise major concerns among educational policy makers.

## STUDENT PERFORMANCE

The information on student performance found in this publication is reported individually to schools and districts through the Academic Excellence Indicator System (AEIS). This system, created as a result of the increasing emphasis placed on the analysis and evaluation of the performance of Texas public school students, provides annual reports on a variety of data for each school campus and district in Texas for purposes of accountability and recognition.

In addition to indicators of student performance, information on school and district staff, finances, programs, and student demographics is reported. These reports allow comparisons of performance as well as resources, provide a basis for setting campus performance objectives for the following year, and inform the public on the performance of their schools. Now in its third year, AEIS reports for the 1992-93 school year were published in May 1993. Exhibit A in the *End Notes* provides a complete listing of the 1992-93 AEIS indicators of student performance.

## Texas Assessment of Academic Skills

The Texas Assessment of Academic Skills (TAAS) testing program has been in place for three years. This program, as its name implies, emphasizes the assessment of academic skills and focuses on students' higher order thinking and problem-solving skills. Previous statewide assessment programs [the Texas Assessment of Basic Skills (TABS) 1980-1985, and the Texas Educational Assessment of Minimum Skills (TEAMS) 1985-1990] measured minimum basic competencies in writing, reading, and mathematics.

Because 1992-93 is a transitional year in the TAAS program, tests were administered in the fall semester at grades 3, 7, and 11 (exit level), and in the spring semester at grades 4, 8, and 10 (exit level). Beginning in 1993-94, TAAS will be administered in the spring, with additional exit-level administrations in the fall and summer for students retaking the tests.

Over 660,000 students were tested in grades 3, 7, and 11 during the fall of 1992 in the areas of reading, writing, and mathematics. In the spring of 1993, over 800,000 students were tested in the same subject areas at grades 4, 8, and 10. In addition, science and social studies field tests were administered to students in grades 4 and 8. Field tests were also administered for end-of-course examinations in Algebra I and Biology I. These assessments will be administered statewide for the first time in the spring of 1994. Additional

**EXHIBIT 10**  
**Percent of Students Passing TAAS by Grade and Subject**

| Grade         | # Students Tested | % Passing All Tests Taken | % Passing Math | % Passing Reading | % Passing Writing |
|---------------|-------------------|---------------------------|----------------|-------------------|-------------------|
| 3rd - Spanish | 16,024            | 40.2%                     | 72.4%          | 54.4%             | 54.3%             |
| 3rd - English | 229,804           | 60.8%                     | 84.5%          | 79.5%             | 68.3%             |
| 7th           | 242,811           | 39.6%                     | 52.4%          | 52.7%             | 69.1%             |
| 11th          | 179,447           | 54.4%                     | 60.7%          | 76.4%             | 83.2%             |
| TOTAL         | 668,086           | 50.9%                     | 66.2%          | 68.3%             | 72.2%             |

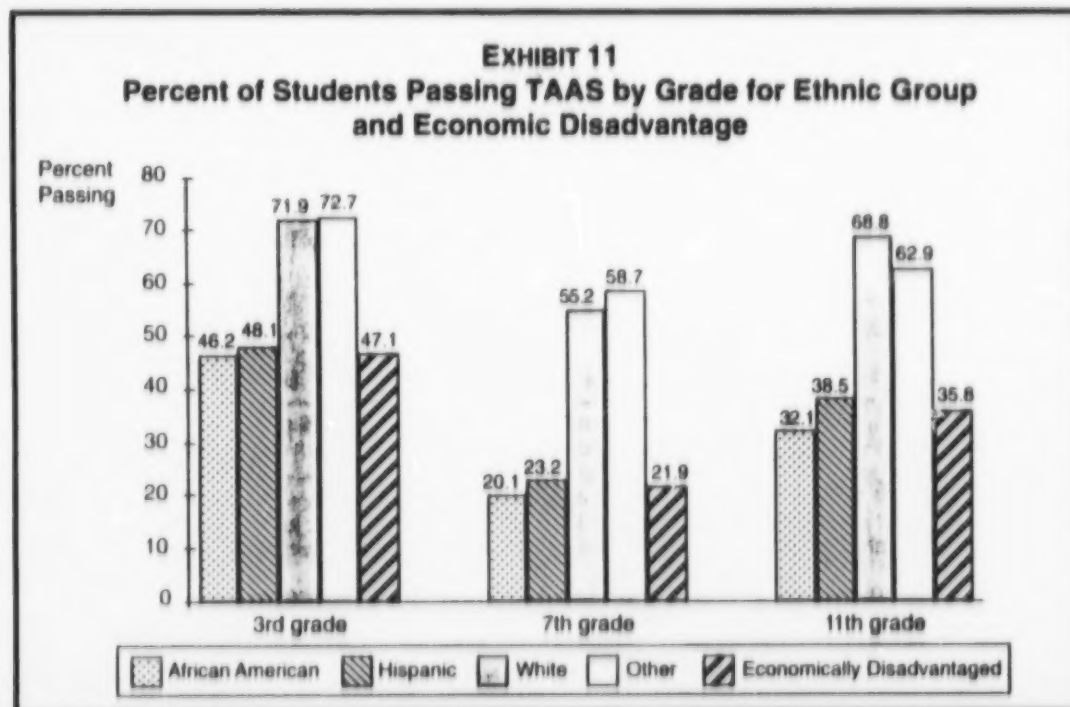

*The TAAS is a state-administered criterion-referenced test that draws its objectives from the essential elements (the state-mandated curriculum) established by the State Board of Education. The 1992-93 school year was a transition year for the TAAS, in which the assessment moved from testing students in grades 3, 7, and 11 (exit) in the fall to testing students in grades 4, 8, and 10 (exit) in the spring. The values shown are from the fall 1992 test administration; spring results are provided in a supplement to this edition of Snapshot. Test results for special education students have been excluded from these calculations.*

tests are being developed in computer literacy (computer-based technology), physical fitness/health (wellness) and oral proficiency in a second language. Districts will have the option to administer these additional tests in the spring of 1994.

The TAAS results reported in this publication represent the performance of non-special education students in grades 3, 7, and 11 in the fall of 1992. The TAAS results of students tested in grades 4, 8, and 10 in the spring of 1993 are available in a supplement to this publication. While various measures can be used to interpret test results, this document reports the percent of students passing all tests taken. The percent passing is variously shown as:

- the percent passing each subject for each grade;
- the percent passing all tests taken for a specific grade;
- the percent passing all tests taken for a specific group of students; or
- the district passing rate for all subjects and all grades.

*Exhibit 10* shows the fall 1992 results by grade and subject for non-special education students. Among the grades tested, the percent passing all tests taken is lowest in grade 7 (39.6 percent) and highest in grade 3 (60.8 percent). Statewide, approximately 51 percent of the students in all grades tested passed all the tests taken. These values represent improvements in performance

The results in this exhibit show clearly that performance on the TAAS varies significantly by ethnic group and economic status. A major focus of Texas educators and of the State Board of Education is the reduction of these disparities, often referred to as the "equity gap." Gaps are smallest in grade 3 where passing rates are higher overall.

relative to students tested the previous year. In 1991, the overall passing rate statewide for students in grades 3, 7, and 11 was approximately 47 percent. In that year, students in grade 3 passed 57 percent of all tests taken, while in grade 7 the passing rate was 36 percent, and in grade 11 approximately 49 percent of the students passed all tests taken.

The subject area with the highest passing rate varies across the three grade levels tested. For example, a larger percentage of students passed writing than mathematics or reading in grades 7 and 11. In grade 3, for both the Spanish and English versions of the test, higher percentages of students passed mathematics. These results are consistent with the previous year's performance.

Significant disparities in performance continue to exist among the major ethnic groups in Texas. Differences between African American and white students passing all tests taken range from 26 percentage points in grade 3 to 37 percentage points in grade 11. Similar, slightly smaller, disparities exist between Hispanic students and white students. See Exhibit 11. Thirty-three percent of African American students and 36 percent of Hispanic students passed all tests taken compared with 65 percent of white, Asian, and native American students. Economically disadvantaged students had passing rates which were 15 percentage points lower than statewide rates and over 20 percentage points lower than passing rates of non-economically disadvantaged students. Progress toward reducing these disparities is a major objective of the State Board of Education's *Long-Range Plan for Public Education*.

Districts must offer remediation to students failing to pass a test in a subject area. In grades 3, 7, and 11, over 328,000 students, or approximately 49 percent of all non-special education students tested, will require remediation in one or more subject areas. This figure is lower than the 348,932 students (53 percent) who required remediation due to failing the TAAS tests at grades 3, 7, and 11 in 1991-92. The state compensatory allotment supports this remediation; however, it is allocated based on counts of economically disadvantaged students, not the number of students requiring services.

Students failing to pass the exit-level test are not eligible to receive a Texas high school diploma. Among juniors taking the October 1992 TAAS exit test, 81,745 (46 percent) failed one or more of the subject areas. These students have four more opportunities to master the exit-level TAAS test before the end of their senior year as the class of 1994. Results for the class of 1992, who began taking the exit test in the fall of 1990, indicate that approximately 3,500 students statewide met all other graduation requirements except mastery of the TAAS test. Beginning in the spring of 1993, the exit-level test is given initially in the spring semester of students'

sophomore year, allowing six retest opportunities prior to graduation. Texas has no certificates of completion for students who fail to pass the exit-level TAAS.

Group information in the *Detailed Statistics* section shows that the percent of students passing all tests taken on the statewide assessment instrument tends to be higher in major suburban districts and lower in large, urban districts, a pattern which has held for the past five years. The two-volume TEA publication *Texas Assessment of Academic Skills: Student Performance Results, 1992-1993*, is available for more information.

| Mathematics       | 19.5                             | 19.6                   | 20.0                  |
| Reading           | 20.0                             | 20.1                   | 21.1                  |
| Science Reasoning | 19.9                             | 19.9                   | 20.7                  |
| Composite         | 19.9                             | 19.9                   | 20.6                  |

Approximately 49 percent of Texas public high school seniors took the SAT, compared with 42 percent of seniors nationwide. Thirty-four percent of both Texas public school seniors and seniors nationwide took the ACT. Texas public school SAT scores were 25 points lower than the nation in 1991-92, compared with 23 points lower in 1990-91. ACT scores remained below the national average as well.

## College Admissions Tests

In Texas, approximately 64 percent of public high school graduates participate in college admissions testing. Of the students graduating at the end of the 1991-92 school year, over 94,000 took either the Scholastic Aptitude Test (SAT) of the College Board's Admissions Testing Program or the ACT component of the American College Testing Program, or both tests. Nationwide, approximately 42 percent of all graduates of public and non-public schools took the SAT and 34 percent took the ACT. In Texas, approximately 49 percent of public high school graduates took the SAT, and 34 percent took the ACT.

The SAT consists of verbal and mathematics components; the ACT includes tests of reading and science reasoning in addition to English and mathematics. Scores on the verbal and mathematics sections of the SAT range from 200 to 800 and sum to the SAT total score, which ranges from 400 to 1600. Each subject area component of the ACT has a score ranging from 1 to 36; the composite is the average of these four scores. Since October 1989, a revised ACT, the Enhanced ACT Assessment, has been administered.

As shown in *Exhibit 12*, Texas average scores on both the SAT and ACT remain below the national averages. For the SAT Total, Texas scores are 23 points lower, 876 compared with 899 for the nation. For the ACT Composite, the comparison is 19.9 for Texas to 20.6 for the nation. Although the number of students taking the ACT Assessment in Texas

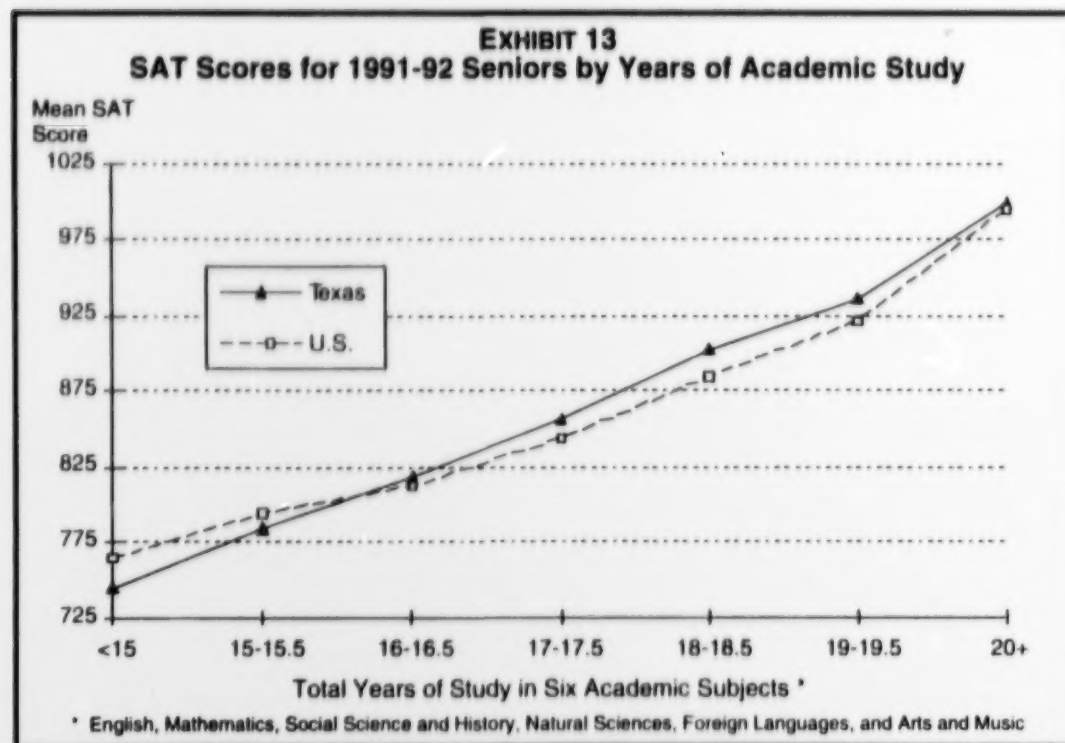

has increased by almost 38 percent since 1986, the average score has shown either modest increases or no change during this same time.

Students who take the SAT report information on their academic preparedness, parental education, and family income. Students' SAT scores tend to rise with increasing numbers of academic courses completed, higher levels of parental education, and higher levels of family income. *Exhibit 13* shows the relationship between years of study in academic subjects and SAT total scores.

Similar relationships exist with ACT test score results. The average ACT composite score for Texas students who took a college preparatory high school program, defined as four years of English and three years each of mathematics, social studies, and natural sciences, is 21.3, which is 3.5 points higher than the average score for students who did not complete such a program.

The lower level of academic preparedness also offers one possible explanation for the lower SAT and ACT test scores of African American and Hispanic students relative to scores of white students. Typically, Texas SAT and ACT results show that African American and Hispanic students complete relatively fewer academic courses compared to white students.

Lower level courses in mathematics and language arts are being eliminated from the Texas curriculum and an increased emphasis

*For both Texas and the nation, test scores rise with academic preparedness. Given comparative levels of preparation, Texas' scores equal or slightly exceed the national totals. Since the mean SAT scores for Texas are lower than those of the nation, this implies that students in Texas take fewer years of academic units on average than do SAT examinees nationwide.*

is being placed on staff development in the instruction of critical-thinking and decision skills. As Texas public school students are exposed to more rigorous and challenging courses, it is expected that more students will be both academically prepared for college and score higher on college admissions tests.

An additional data element reported from the college admissions testing program is the percentage of 1991-92 graduates scoring at or above the AEIS criterion (1000 on the SAT; 24 on the ACT). Only 16 percent of the class of 1992 met or exceeded this standard of excellence.

## Texas Successful Schools Awards System

The Texas Successful Schools Awards System (TSSAS) recognizes and rewards schools making the greatest progress toward achieving state educational goals. For 1992-93, the second year of the program, monetary awards totalling \$20 million were distributed to 507 schools for gains in performance. Recognition was given to 124 schools for accomplishing all state performance goals.

An additional 826 schools accomplished some portion of the state goals and were recognized for outstanding effort. Some schools meet the criteria for placement in more than one category.

To determine eligibility for the program, performance was examined on a subset of the indicators of the AEIS: percent passing reading, writing, and mathematics on TAAS, dropout rates, percent taking college admissions tests, and percent scoring above the

criterion on college admissions tests. To be eligible for an award, performance for all students and for students grouped by ethnicity and low income has to meet or exceed criteria recommended by an advisory committee and approved by the commissioner of education.

The total number of schools receiving either performance recognition, cash awards, or certificates for outstanding effort in 1992-93 was 1,289, a significant increase over the 736 TSSAS awardees in 1991-92.

## DISTRICT STAFF

School district staff include professionals, educational aides, and auxiliary staff. Professional staff are teachers, central and campus administrators, and professional support staff such as supervisors, counselors, and librarians. Since the fall of the 1991-92 school year, full-time equivalent (FTE) staff counts increased 4.2 percent and average base salaries for these staff increased 2.6 percent.

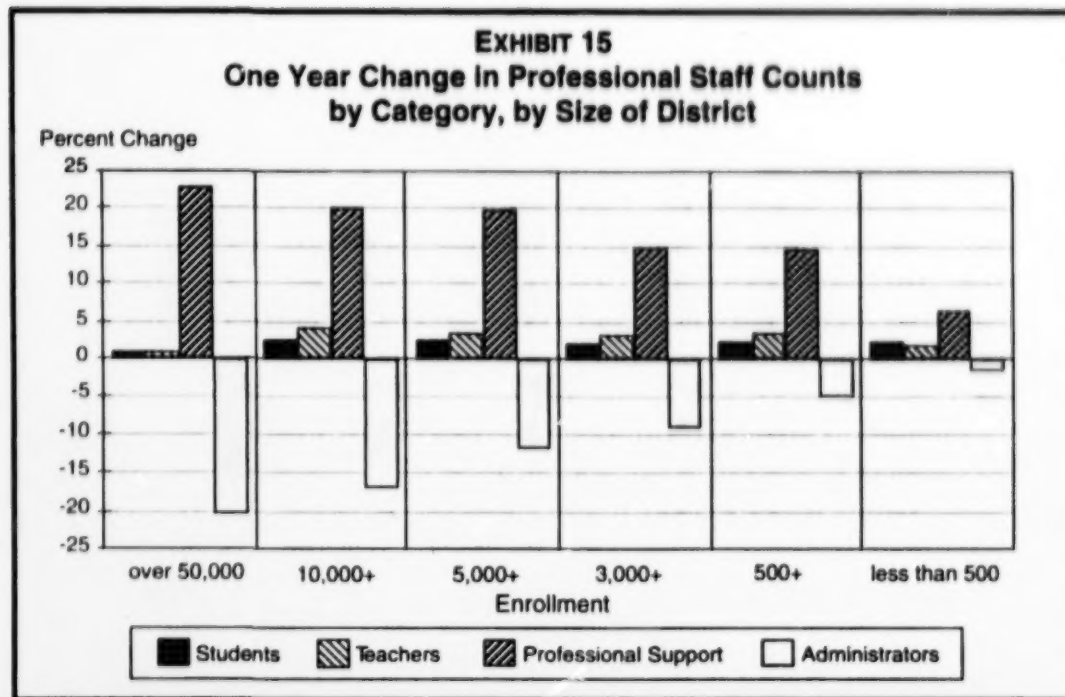

### STAFF COUNTS

**Teachers.** Teachers comprise the largest single category of staff; they account for 84 percent of professional staff and 52 percent of total staff. See *Exhibit 14*. Although students increased by 2.2 percent over the previous year, teacher FTE counts grew by 3.2 percent. This amounts to approximately one new teacher FTE for every 11 new students. A

**EXHIBIT 14**  
**District Staff by Category**

| Category                   | FTEs           | Percent of Total | Average Salary Base Pay Only | Average Salary (Including Supplements) |
|----------------------------|----------------|------------------|------------------------------|----------------------------------------|
| Teachers                   | 219,338        | 52.3%            | \$28,398                     | \$29,935                               |
| Campus Administrators      | 10,607         | 2.5%             | \$45,558                     | \$45,807                               |
| Central Administrators     | 3,991          | 1.0%             | \$54,024                     | \$54,218                               |
| Professional Support       | <u>27,491</u>  | <u>6.6%</u>      | <u>\$35,374</u>              | <u>\$35,664</u>                        |
| <b>TOTAL PROFESSIONALS</b> | <b>261,427</b> | <b>62.3%</b>     | <b>\$30,219</b>              | <b>\$31,555</b>                        |

| Auxiliary Staff            | <u>121,446</u> | <u>28.9%</u>     | <u>\$13,556</u>              | <u>\$13,556</u>                        |
| <b>TOTAL STAFF</b>         | <b>419,590</b> | <b>100.0%</b>    | <b>\$23,704</b>              | <b>\$24,541</b>                        |

See *Exhibit E* in the *End Notes* for a list of positions assigned to each of these categories. Supplements are amounts paid in addition to an employee's base salary and include such things as career ladder, sponsorships, coaching, and band or orchestra assignments.

Staff coded as non-managerial administrators are now coded in the support roles, resulting in significant declines in the number of administrative personnel. Greater percentage declines are evident in the larger districts than in the smaller.

higher growth rate for teachers is to be expected since student growth does not occur uniformly across districts and grades, requiring districts to hire additional teachers for less than full classrooms.

Rates of teacher increases vary with the size of the district. The seven districts with over 50,000 students and the 379 districts with under 500 students added teachers at either

less than or equal to the average enrollment growth in these districts. For the largest districts, student increases were apparently large enough that new teachers could be added proportionate to new classes—one teacher to every 17.1 students. In the smallest districts, many new students were likely absorbed into existing classes, thus reducing the demand for new teachers. See Exhibit 15.

The remaining 662 districts with enrollments between 500 and 50,000 students added teachers at rates higher than the rate of enrollment growth and reduced their average student/teacher ratios. Districts with enrollment between 1,000 and 1,600 hired new teachers at the highest rate—one for every 7.4 new students.

**Support and Administrative Staff.** The combined categories of administrators and professional support staff increased by 5.7 percent between 1991-92 and 1992-93. However, for the third year in a row, professional support staff increased by the largest percentage of any staff category. Between 1991-92 and 1992-93, that category grew by over 19 percent, in part due to changes in reporting codes consolidating some administrative and support labels. Recent concerns about district administrative costs have prompted re-evaluation of the definition of administrative staff at both the state and district levels. Because of these state and local actions, some previously identified administrative staff are now coded as support.

Staff coded as administrators in 1992-93 are restricted to all types of superintendents and principals, instructional officers, athletic directors, business managers and tax collector/assessors, and directors of personnel. Non-managerial administrative personnel are now coded in the support roles. As a result, the number of administrative personnel has declined and the administrative average salary has increased. Central administrative staff declined by more than a third, while campus

administrators increased 1.3 percent, below the 2.2 percent rate of student growth. The combined growth of administrative and professional support staff was 2.6 times the growth in the student population.

**Non-professional Staff.** The number of educational aides increased by 8.9 percent this year and by 8.1 percent between 1991 and 1992. This growth took place at all types of campuses. In 1993, aides employed at elementary schools and middle schools increased by at least 10 percent over the previous year. However, between 1991 and 1992, the largest growth occurred in middle schools, junior highs, and high schools. Analysis shows that some of these aides will advance to teaching positions. During 1992-93, approximately 1,100 teachers (less than one percent of the total teaching staff) had been employed as aides sometime between 1989 and 1992.

Auxiliary staff, the second largest category of staff at 28.9 percent of the total, increased by 4.3 percent. Auxiliary staff include secretaries, bus drivers, maintenance workers, and cafeteria workers.

The ethnic composition of district staff changed only slightly from the previous school year. Minority staff increased from 33 to 34 percent of all staff employed in Texas public schools. This can be disaggregated to 22.2 percent Hispanic, 11.1 percent African American, and 0.6 percent Asian/Pacific Islander and native American. Among teachers, approximately 23 percent are minorities, which represents

no change from the previous school year. Given that almost 52 percent of public school students are minorities, Texas must intensify efforts to recruit ethnic minorities into careers in education. In 1991-92, only 25 percent of the candidates seeking initial certification in Texas were African American, Hispanic, Asian/Pacific Islander or native American. Only 12 percent of the teachers entering Texas from other states in 1991-92 belonged to one of these ethnic groups. In contrast, the 1992-93 alternative certification program interns were 51 percent minority and the former educational aides now in teaching positions were 47 percent minority. At the moment, these routes to certification are most successful at ethnic minority recruitment.

## TEACHER EXPERIENCE

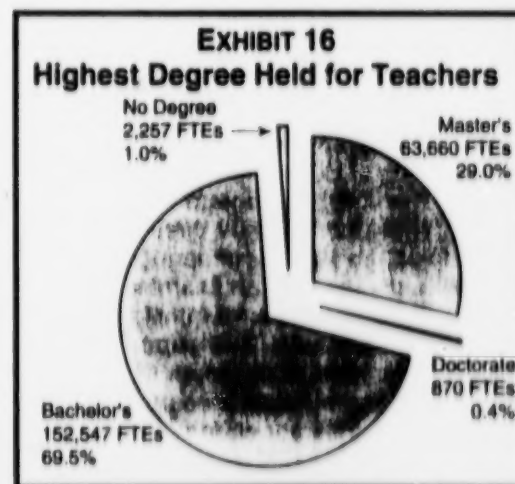

Teachers employed in Texas in 1992-93 averaged 11.4 years of total teaching experience. Nearly 45 percent of all teachers have between 1 and 10 years of experience and over 16 percent have more than 20 years experience. Over the past three years, the percent of new teachers has increased for all ethnic groups. In 1992-93, new teachers accounted for 6.5 percent of the total. Teachers at secondary schools tend to be more experienced, 12.8 years on average, compared with elementary school teachers with an average 10.8 years of experience. Districts with greater enrollment growth have less experienced teachers, indicating new, rather than experienced, teachers are more often hired to meet the increase in demand.

## TEACHER CREDENTIALS

To teach in public schools in Texas, individuals must earn appropriate certification by satisfying a combination of education, experience, and test requirements that vary depending upon the certification route pursued.

### Education

As shown in *Exhibit 16*, the majority of teachers in Texas (69.5 percent) hold a bachelor's degree. An additional 29.4 percent have earned master's or doctoral degrees. The

Twenty-nine percent of Texas teachers hold a master's degree compared with the 1990-91 national average of 42.6 percent. The percent of Texas teachers with advanced degrees has declined about one percent per year since 1988-89.

one percent of teachers reported as having no degree are composed of certain vocational education teachers who are certified by meeting other experience and education requirements. Larger districts have a larger proportion of teachers with advanced degrees. Thirty-five percent of the teachers in the seven largest districts have master's degrees or higher, compared with 22 percent of teachers in the smallest districts. The percentage of Texas teachers with advanced degrees has been gradually declining in recent years; about one percent per year since 1988-89. Rural districts seem to be faring worse, losing proportionately more advanced degreed teachers than the urban districts over the same time period.

## Certification

To become certified in Texas, an educator must pass appropriate Examination for the Certification of Educators in Texas (ExCET) tests. The ExCET program consists of 53 content specialization tests, three professional development tests (*i.e.*, pedagogy, or teaching methods), and seven examinations for a professional certificate. Examples of a professional certificate are superintendent, mid-management administrator, and counselor. In general, examinees take multiple tests: the appropriate pedagogy and one or more content area tests.

Prior to taking the ExCET, students seeking to enter an approved teacher preparation program in a Texas public college or university must pass the Texas Academic Skills

Program (TASP) test, which assesses basic skills in reading, writing, and mathematics.

Although the largest group of ExCET examinees is recent university graduates, out-of-state teachers, alternative certification candidates, and already-certified individuals seeking certification in additional areas also take the ExCET.

During the 1991-92 school year, approximately 28,000 individuals took one or more ExCET examinations for the first time. Of the 16,306 seeking initial certification, recent graduates comprised 63 percent, out-of-state

teachers, 27 percent, and alternative certification candidates, 10 percent. The success rate for all ExCET tests attempted for the first time (49,256 tests taken) was 85.4 percent. Already-certified educators have the option of seeking additional certification by taking other ExCET tests, either with or without additional university-based preparation. Examinees attempting ExCET tests without additional college study have the lowest passing rates. See *Exhibit 17* for the 1991-92 ExCET passing rates by certification route.

Passing rates on the ExCET vary by both training institution and program within the

| Professional Certification                               | 3,304                    | 88.0%                                 |

\* Some examinees seeking additional certification may appear in more than one route.

7,692 Texas teachers sought additional certification under a law which allows those who pass the ExCET to forego formal preparation (for some, an internship is also required). The passing rate for these test takers is lowest among the groups tested, 75.1 percent. The areas in which the most examinees seek certification-by-examination are English as a second language, generic special education, and elementary education.

institution. Comprehensive information on ExCET testing is published each year by the Texas Education Agency Division of Professional Educator Assessment and Appraisal.

Alternative certification is a process offered in Texas through which degreed graduates in disciplines other than education can become certified teachers. These candidates must pass a basic skills examination to enter the program, successfully complete a one-year internship, and then pass the appropriate ExCET examinations to obtain certification. Since its inception in 1985-86, the number of school districts participating in alternative certification programs has grown from 1 to 378.

Teachers certified in Texas before 1986 must revalidate their certification for employment in Texas public schools by passing either the Texas Examination of Current Administrators and Teachers (TECAT) or any ExCET examination. Approximately 2,500 individuals per year take the TECAT, a test of minimum skills in reading and writing.

### Permits

Teachers, counselors, principals, and certain administrators who have not yet earned the appropriate certification may be granted one of five types of permits in order to perform their assigned duties. A permit must be acquired for a non-certified person to teach, for a teacher to undertake counseling or administrative duties, or for a teacher to teach more than one class out-of-field.

The TEA must authorize the nonrenewable permit, emergency teaching permit (ETP), special assignment permit (SAP), and vocational permit. A district superintendent may authorize the temporary classroom assignment permit (TCAP) for a teacher to teach more than one class out-of-field at the secondary level.

Statewide, four percent of teachers hold an active permit of some type. The percentage of teachers holding permits varies by subject area and student population served. The two areas with the greatest proportion of teachers holding emergency teaching permits are bilingual education and special education. For the past three years, the U.S. Department of Education has designated these as teacher shortage areas in Texas, making teachers in these areas eligible for loan deferments or a reduction of teaching obligation under federal loan and scholarship programs.

## PROFESSIONAL SALARIES

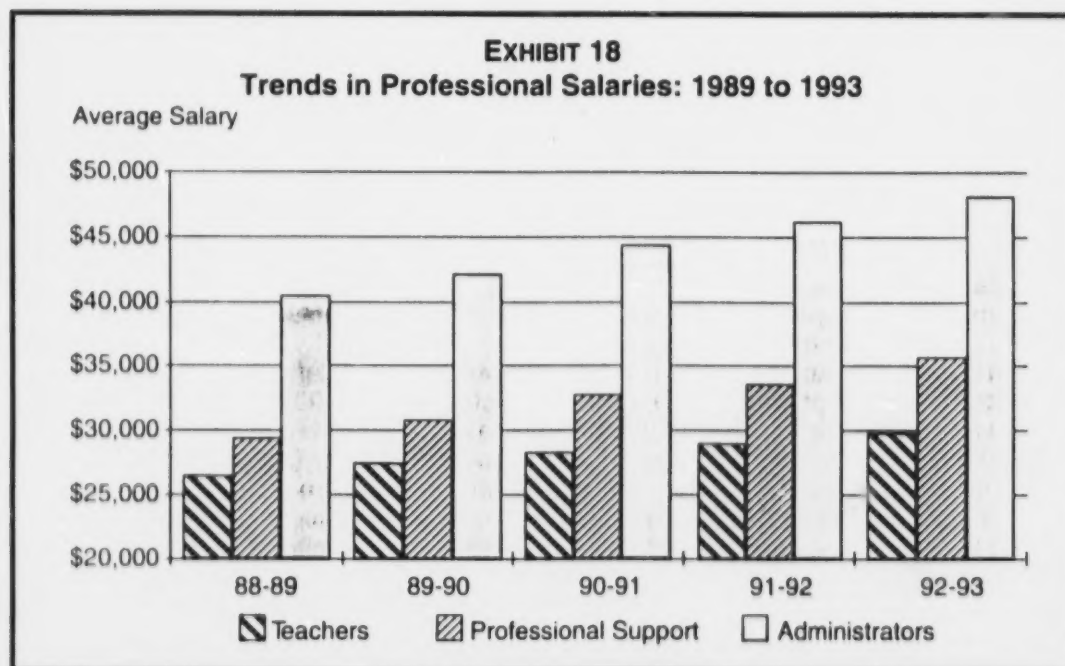

In 1992-93, professional base salaries grew by 3.1 percent, to \$30,219, from the 1991-92 school year. Total salaries, including reported supplements, climbed to \$31,555, also a 3.1 percent increase. Supplements are amounts paid in addition to the base salary contracted for an employee's regular duties. Supplements are paid for such things as career ladder, coaching, club sponsorships, and band or orchestra assignments.

Central administrative salaries exhibited the greatest percent increase, over nine percent, followed by professional support salaries with a 5.7 percent increase. These averages are no doubt affected by the changes in definition previously mentioned. On average, central administrators earn \$54,218, campus administrators \$45,807, and professional support staff \$35,664. Teacher total salaries increased by 3.1 percent, to \$29,935. *Exhibit 18* depicts trends in professional salaries since 1988-89.

Texas teacher salaries ranked 34th among the states in 1992-93. The average salary for Texas teachers was 14 percent below the national average of \$35,000. However, how much teachers earn is closely linked to their years of teaching experience. For example, in Texas the minimum amount teachers can be paid is controlled by a state mandated salary schedule which requires that minimum salaries rise as the years of experience of the teacher increase. Because the average experience level of teachers varies from state to state, average salaries are likely to be higher in states with more experienced teachers.

In addition to differences in teacher experience among the states, cost-of-living differences explain some of the national variation. According to the American Federation of Teachers, in 1991-92 Texas ranked 35th in teacher salaries. However, when cost-of-living was considered, Texas moved to the 21st rank.

Although Texas salaries are low compared with other states, Texas teachers enjoy a

*Between 1988-89 and 1992-93 the average teacher salary in Texas rose 13 percent to \$29,935. Administrative salaries have risen 19 percent and professional support 21 percent over the same time period. All salaries in this exhibit include supplement amounts, for example career ladder supplements, for all years shown.*

pupil-teacher ratio that is lower than the national average: 16.3 in Texas compared with 17.3 nationally in 1991-92. The expense of maintaining smaller class sizes limits the ability of districts to compensate teachers with higher salaries. Of the 34 states with salaries higher than those in Texas, 19 also had higher pupil-teacher ratios in 1991-92.

Teacher salaries vary by subject taught and campus type. Two subject areas in which teachers receive higher pay given equal years of experience are teachers of gifted and honors students and physical and health education teachers. Most of the salary difference between the health and physical education teachers and other secondary classroom teachers can be attributed to the supplement

tal pay physical education teachers receive for coaching athletic teams.

New teachers earn about the same starting pay regardless of campus type, but as the years of experience increase, high school teachers earn more than their middle and elementary school colleagues. Again, this is likely due to increased opportunities for salary supplements related to co-curricular and extra-curricular activities at the higher grades.

Analysis of salary increases by size and type of district indicate the greatest increases occurred in large, urban districts. Growth of teacher base salaries in the seven largest districts increased 4.7 percent on average this year compared with 3.9 percent a year ago. The smallest districts in the state, those with fewer than 500 students enrolled, exhibited increases in teacher base salaries of two percent, compared with 1.2 percent in 1992. Since 1989-90 the difference between what the major urban districts pay and what rural districts pay has been steadily increasing. For teacher salaries, urban districts paid 11 percent more in 1989-90, but over 17 percent more in 1992-93. Cost-of-living differences between urban and rural areas explain some of this variation.

A career ladder for teachers was mandated by the legislature in 1984 and first implemented in the 1984-85 school year. The system was initiated to reward excellence in the teaching field and to attract talented students to the teaching profession by raising teacher compensation.

The career ladder was originally intended to have four levels; however, as of 1992-93, the last year the career ladder is authorized in statute, only levels one, two, and three were implemented. Placement decisions are made by the employing district and are based on job performance, education, and years of experience.

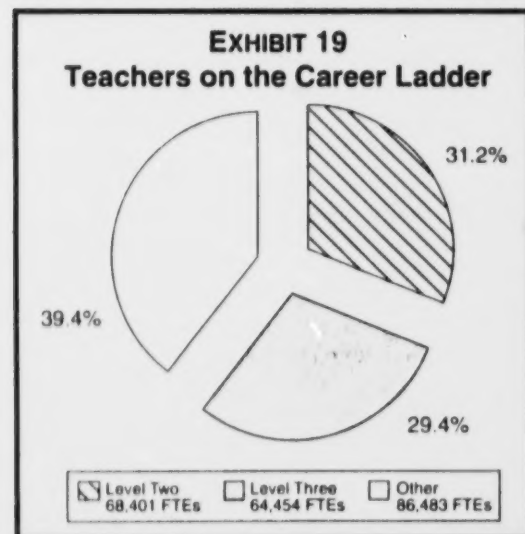

Teachers meeting specified performance standards and placed on levels two or above are eligible to receive salary supplements. State law establishes the range for these supplements

and the state allots each district money for the career ladder on a per-student basis. In 1992-93, districts received \$90 for each student in average daily attendance to be used to supplement the salary of each teacher above level one.

Senate Bill 7, passed during the 73rd session of the Texas legislature, abolished the career ladder effective with the 1993-94 school year. In its place will be a teacher compensation allotment of \$90 for each student in average

daily attendance, which is to be used to pay the salaries of teachers who were entitled to career ladder supplements.

Estimates of the average career ladder supplement amounts paid in 1992-93, are \$1,601 and \$3,149 for levels two and three, respectively. These estimates are based on the level two and three teachers for whom supplements are reported. Districts reported supplement amounts for only 37 percent of the teachers placed. See *Exhibit 19*.

132,855 teachers are reported on levels two and three of the career ladder, however supplement amounts are reported for only 49,452 (37 percent). The 86,000 teachers not on level two or three are either on level one or were reported with no career ladder assignment. These teachers are not eligible for supplements.

## FINANCES

1992-93 funding for public education in Texas comes from four major sources: local, state, county education district (CED), and federal. Local and CED funding is derived from taxes on district property wealth. State funding is based on legislative appropriations determined through a statutorily-defined finance system. Federal funds are appropriated by Congress, generally for specific purposes.

### STATE FUNDS

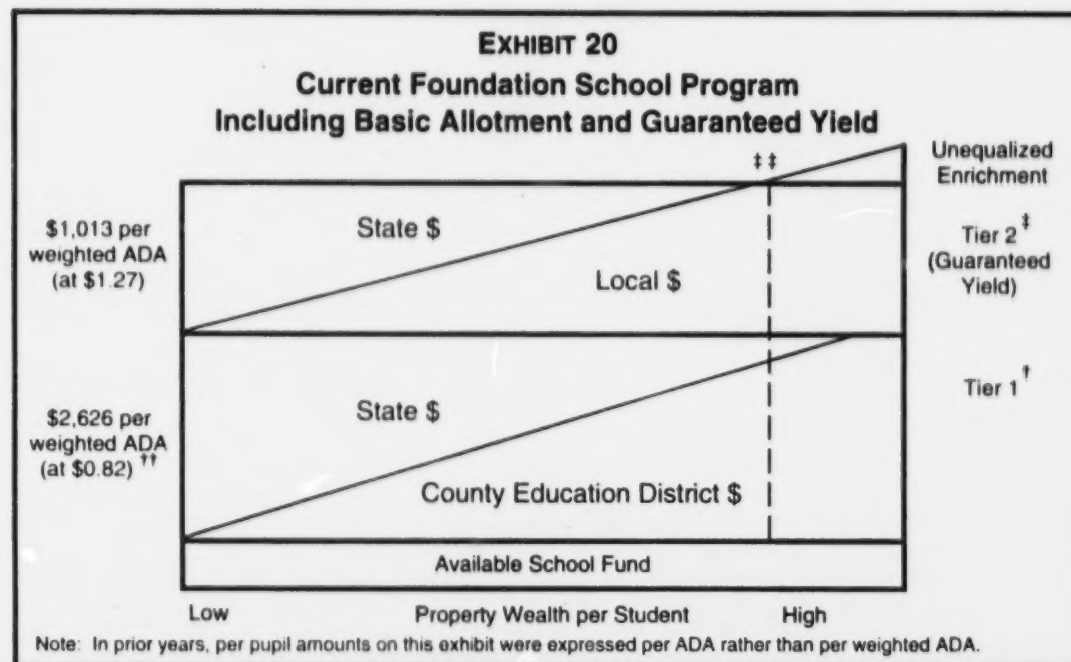

State funds for public education in Texas are distributed through a two-tiered system of formulas known as the Foundation School Program (FSP). In 1989 and 1990, the FSP underwent significant revision during the 71st session of the Texas legislature in response to the *Edgewood v. Kirby* litigation. Senate Bill 351, passed by the 72nd legislature and

effective August 26, 1991, provided for an additional funding source for each district, the CED. Under this legislation, funds from taxable property are generated by two entities: the local school district and the CED. Federal funds flowing through the state to school districts are not a factor in the state system of financing Texas public schools.

#### Tier 1

The first tier of the FSP is a financing system made up of a series of allotments designed to ensure that each school district can provide instructional programs suitable to meet the minimum educational needs of its students. Allotments are calculated using various student counts. These include Average Daily Attendance (ADA), head counts based on identified characteristics such as family in-

- † In tier 1, local funds are generated by the CEDs which tax property within their boundaries at a statutorily-required rate of \$0.82 per \$100 of valuation.
- †† To provide equity, the state provides additional funds to CEDs with low wealth to maintain an average funding level of \$2,626 per weighted ADA.
- ‡ Tier 2 provides additional, or enrichment funds, generated when districts (rather than CEDs) tax property above the tier 1 rate.
- ‡‡ In districts with wealth in excess of \$225,000 per weighted pupil, a penny of tax effort generates more than \$22.50 per pupil, resulting in unequalized enrichment.

come, and full-time equivalent student counts modified by program or instructional arrangement weights. For the 1992-93 school year, the basic allotment for each weighted pupil in ADA was increased from \$2,200 to \$2,400.

The state and school districts share the costs of the calculated allotments. The share for each depends primarily on the property tax base of the school district. As of 1989-90, districts were required to raise their share of this tier of the FSP, called the local fund

assignment (LFA), as a condition of receiving the state share.

## County Education Districts

Beginning with the 1991-92 school year, a second taxing entity, the CED, replaced the school district in generating revenue for the LFA and, for school finance purposes, substantially equalized the wide range of district property tax bases. The 188 CEDs, which are made up of one or more counties, generate and distribute this LFA revenue to each school district within the CED.

Each CED was required to levy a mandatory property tax of \$0.82 in 1992-93, an increase of \$.10 over the 1991-92 mandatory rate. Before SB 351, very wealthy districts could raise their LFA with a tax rate lower than this minimum required tax rate. These districts, known as budget-balanced districts, disproportionately contributed to the inequity in the school finance system. By creating CED tax bases through the combination of local district property values, the equity of the first tier of the FSP system was substantially improved. No CED is budget-balanced.

## Tier 2

The FSP revised by SB 351 retained the guaranteed yield program begun in 1989-90 to provide additional funds to districts. This level of financing, often called the second tier, enables low wealth districts to earn additional state aid by setting their tax rate above the

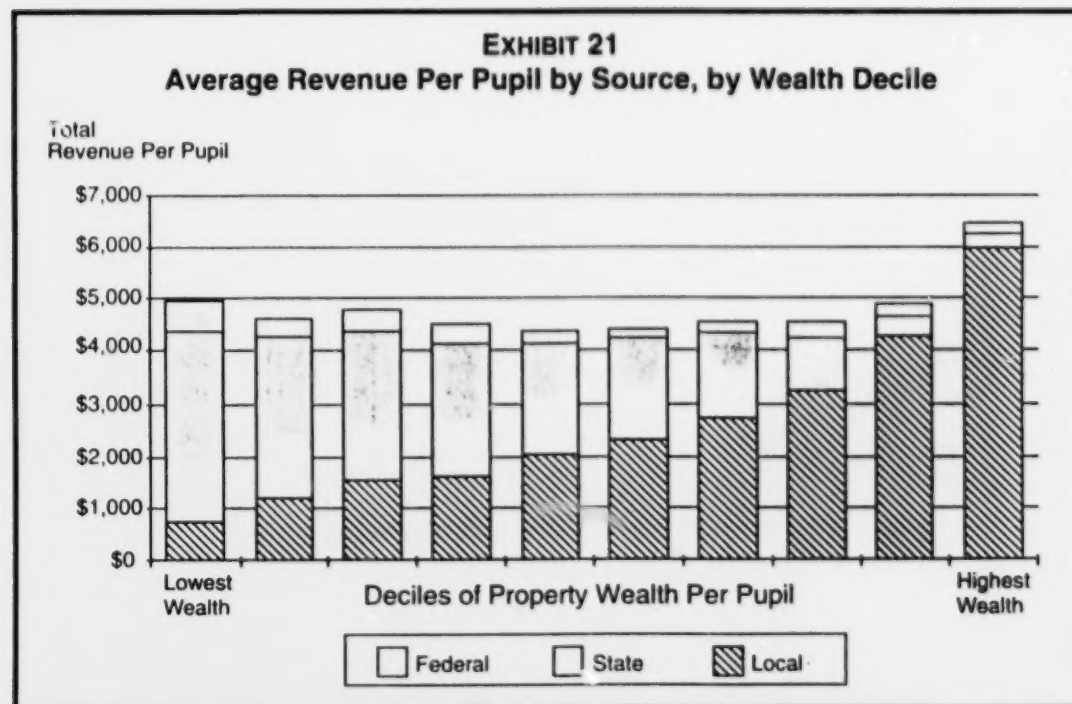

minimum level required for the first tier of the FSP.

For each penny of tax effort the district levies above the first tier requirement, up to an additional \$0.45, the state will guarantee a yield of \$22.50 per penny, per weighted student. The maximum guaranteed yield amount for 1992-93 is \$1,013 per weighted student. The effect of a guaranteed yield program is to

increase the tax base available to property-poor school districts.

*Exhibit 20* illustrates the relationship between district wealth and state funding for both the basic allotment and guaranteed yield tiers of the FSP. In both tiers, poorer districts receive a larger percentage of their revenue from the state while wealthier districts fund their operations with a greater percentage of local funds.

Like *Exhibit 20*, *Exhibit 21* shows the inverse relationship between wealth and state aid. It also highlights the fact that the local effort of the wealthiest group of districts generates more revenue than the combined state, local, and federal amounts of the poorer groups. However, in the remaining 90 percent of districts total revenue per pupil does not vary substantially due to wealth because of the FSP structure.

The FSP is designed to deliver proportionately more funds to those districts less able to generate local funds. Approximately 10 percent of the districts in the state are represented by each bar on this graph.

## LOCAL FUNDS

Local funds for public education are raised primarily through the local property tax. Taxes are levied against locally assessed property rolls to generate revenue. All tax rates shown in this publication are effective tax rates, calculated using the market value of property estimates from the Comptroller's Property Tax Division (CPTD). Locally adopted rates are not used for inter-district comparisons because they do not control for variation in local appraisal practices.

Districts set two tax rates each year, one for maintenance and operations (M&O) and another for debt service, called the interest and sinking fund rate (I&S). M&O tax rates are subject to a statutory maximum of \$1.50 per \$100 assessed valuation. If the amount of taxes levied in a given year exceeds the preceding year's levy by eight percent, voters may petition for a tax rollback election. Districts set their local M&O rate to generate revenue above the statutorily-defined CED rate. Debt service tax rates are not subject to the same limitations as those for maintenance and

operations. Item 63 in the *District Detail*, total tax rate, includes the CED tax rate plus the district M&O and I&S rates.

### Change in Property Tax Rates

Increases in local tax effort have been dramatic during the last decade. The total average effective tax rate has risen from \$0.72 per \$100 valuation in 1986-87 to \$1.30 in 1992-93, an 81 percent increase in six years. See *Exhibit 22*. The M&O effective tax rate shown for 1992-93 in this exhibit includes both the \$0.82 CED rate and the state average school district M&O rate. Almost all the districts in the state (87 percent) now have total effective rates over \$1.00, compared with only 137 districts (13 percent) with rates at this level six years ago.

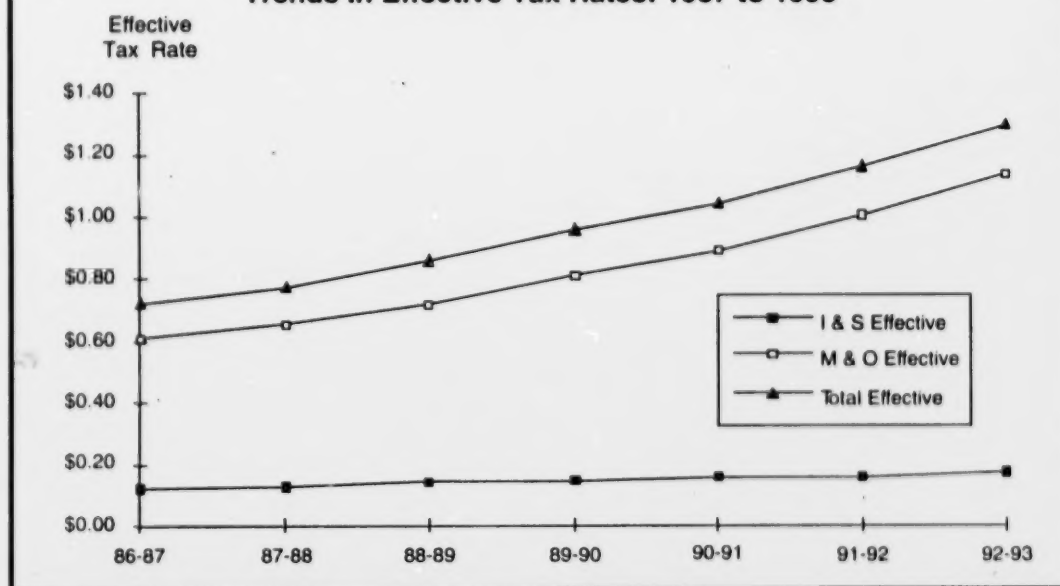

Statewide taxable property values in 1992-93 totalled \$621 billion, about \$8 billion (or one percent) less than the previous year. Property values have declined each year for at least the past seven years by 0.5 percent to 4.0 per year. Given the declining property values, districts must tax at higher rates in order to generate the same levy amount as in prior years. In districts with increasing enrollments, taxes must be even higher to generate the same levy amounts per pupil.

These general economic conditions have affected finances at the state level as well. Lawmakers have divided the revenue available among an increasing array of state services. Although state assistance for the Foundation School Program has increased

by 30 percent per pupil between 1986-87 and 1992-93, school operating expenditures per pupil have grown by 37 percent over the same time period, indicating proportionately less support from the state.

Additional factors contributing to increased local effort include an increase in the minimum required tax rate with the advent of CEDs (from \$0.72 to \$0.82 between 1991-92 and 1992-93) and incentives within the guaranteed yield which encourage districts to boost their tax effort in order to receive state equalizing funds.

**EXHIBIT 22**  
**Trends In Effective Tax Rates: 1987 to 1993**

School district tax rates continue to increase, driven by falling property values, a growing student population, and in recent years, by legislative incentives for districts to raise their tax effort to receive state equalizing funds. The M&O rate depicted in 1991-92 and 1992-93 is composed of the local M&O rate plus the minimum required CED rate. An increase in the minimum required rate, from \$0.72 in 1991-92, to \$0.82 in 1992-93 has also contributed to the increase in the total rate paid by taxpayers.

## FEDERAL FUNDS

Almost all federal funds are appropriated by Congress for specific programs or specific populations of students, and must be expended for designated purposes. The majority of these federal funds must be spent to supplement programs already in place, not to relieve the state of its financial obligation to provide programs that address the needs of special students. Often, the federal appropriations permit local and state use of each state's allocation. The portion of the state's allocation to be spent by local school districts is distributed on a formula basis. The remaining allocation is discretionary and may be spent at either the state or local level.

Examples of federal sources of funding to school districts are the National School Lunch Program, various special education funds, and the Elementary and Secondary Education Act Chapter I program for low-income students.

## ACCOUNTING FOR THE SYSTEM

Texas public school districts use a uniform accounting system to record revenues and expenditures. Other entities, such as regional education service centers and county, state, and federal governments also receive and spend funds on behalf of public education in Texas. School district revenues, in combi-

nation with the revenues of these other entities, are referred to as total receipts. All expenditures made by local school districts, plus the additional expenditures made by all other entities for public education are referred to as disbursements.

## RECEIPTS

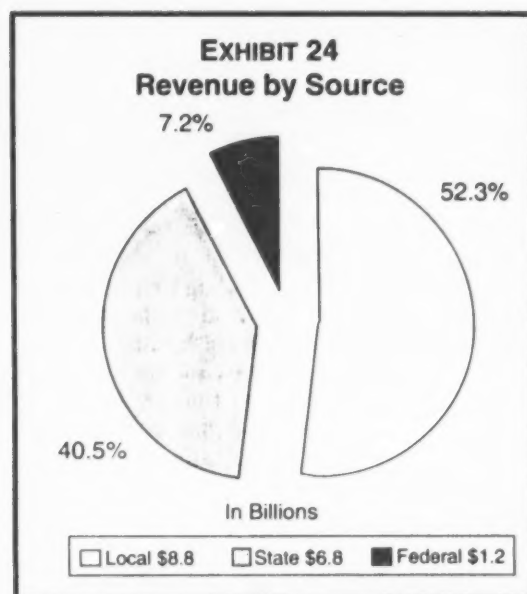

The major sources of revenue for public education are the state FSP and the tax revenue generated at the local level by districts and CEDs. *Exhibit 23* shows all receipts and disbursements on behalf of public education by source. Receipts equal total revenue from all sources plus other resources; disbursements equal total expenditures by all spending

**EXHIBIT 23**  
**1992-93 Receipts and Disbursements by Source**

| Originating Source     | Receipts                | Pct. of Total | Disbursements           | Pct. of Total | Spending Agents            |
|------------------------|-------------------------|---------------|-------------------------|---------------|----------------------------|
| Local                  | \$9,395,317,859         | 47.6%         | \$17,302,381,645        | 89.9%         | Local                      |

| <b>TOTAL REVENUE</b>   | <b>\$19,106,461,331</b> | <b>96.8%</b>  | <b>\$18,555,205,737</b> | <b>96.4%</b>  | <b>TOTAL EXPENDITURES</b>  |
| Other Resources (Debt) | \$634,762,922           | 3.2%          | \$688,813,557           | 3.6%          | Other Uses (Debt)          |
| <b>TOTAL RECEIPTS</b>  | <b>\$19,741,224,253</b> | <b>100.0%</b> | <b>\$19,244,019,294</b> | <b>100.0%</b> | <b>TOTAL DISBURSEMENTS</b> |

The sources of the data shown are TEA accounting records and financial data reported to the TEA by all school districts. Revenues and expenditures in this exhibit do not match revenue and expenditure items in the *District Detail* for two reasons: 1) the *Detail* reports budgeted information while this exhibit shows estimated actual amounts, and 2) the *Detail* shows revenue and expenditures of only one entity involved in public education spending: local school districts. Note that revenues from CED taxes are included in the local revenue category.

Districts budgeted \$16.8 billion in total revenues in 1992-93, an increase of 9.6 percent over 1991-92. The vast majority of local funds, over 90 percent, are from local property taxes. This distribution is affected by the inclusion of debt service funds, which are almost entirely generated from local sources.

entities plus other uses. Other resources and other uses are related to local debt obligations.

Local revenue, \$9.4 billion, represents only those funds received directly by school districts. State revenue, \$8.2 billion, includes FSP funding and other items such as textbook purchases and state-matching contributions to the Teacher Retirement Sys-

tem. Additional revenue sources shown in the exhibit include federal funds and county and service center contributions. Other resources are the local issuance of debt and income from the sale of assets. Overall, total receipts in 1992-93 increased to \$19.7 billion, 10 percent more than they were in 1991-92.

### District Revenues

Total revenue from all sources totalled \$19.1 billion in 1992-93. Of this, \$16.8 billion was budgeted by local school districts, representing an increase of 9.6 percent over 1991-92. The difference between district budgeted revenues and total revenue from all sources is \$2.3 billion. A portion of this difference is attributable to revenues for items such as textbook purchases and state-matching contributions to the teacher retirement system which are not budgeted by local districts. The most significant portion of the difference, however, is due to the fact that districts historically underbudget the revenues they actually receive.

*Exhibit 24* shows district budgeted revenues by source. Local funds comprise 52.3 percent of total revenues in 1992-93, a slight increase over the 52.2 percent attributable to local funds in 1991-92. The vast majority of these local funds, 92 percent, are from local property taxes. Local revenues increased 9.8 percent relative to 1991-92, while state revenues increased by 9.4 percent, and federal revenues increased by 8.8 percent. Federal revenues as a percentage of the total decreased from 7.3 in 1991-92 to 7.2 percent. In

any district, the composition and level of revenue sources may vary substantially from the state average depending upon local wealth and qualifications for federal assistance.

Historically, the local portion of total revenues has risen from a low of 48 percent in 1984-85 to a high of nearly 53 percent in 1989-90. Conversely, the state portion had steadily decreased from a high of 46 percent in 1984-85 to a low of 40 percent in 1989-90. In 1990-91, due to an additional \$500 million injected into the system as a result of Senate Bill 1, 71st Legislature, Sixth Called Session, the percent of revenue from state funds increased to 41.4 percent. This boost of state funds stabilized the decline of the state share and represented the first major influx of state funds since House Bill 72 in 1984-85. However, in 1991-92, additional state revenue was more than matched by increases in local revenue and the state portion of school district revenue decreased to 40.5 percent. In 1992-93 the state portion remained at 40.5 percent of the total.

### DISBURSEMENTS

As *Exhibit 23* shows, 90 percent of the disbursements for public school education are made by local school districts. The remaining 10 percent are expended directly from other governmental entities such as state, county and federal governments, and ESCs. Examples of state disbursements include expenditures for textbooks, state-administered schools, the Teacher Retirement System, and the TEA.

## District Expenditures

Expenditures are recorded by fund, function, object, and in some cases, by program. Functions describe the broad purposes of expenditures, such as instruction or administration. Object classifications describe the service or item purchased. Program classifications must be used to identify instructional areas and/or arrangements, such as the regular, special, vocational, and bilingual education programs. See *Exhibit 25* for the distribution of various expenditure categories by function, object, and program.

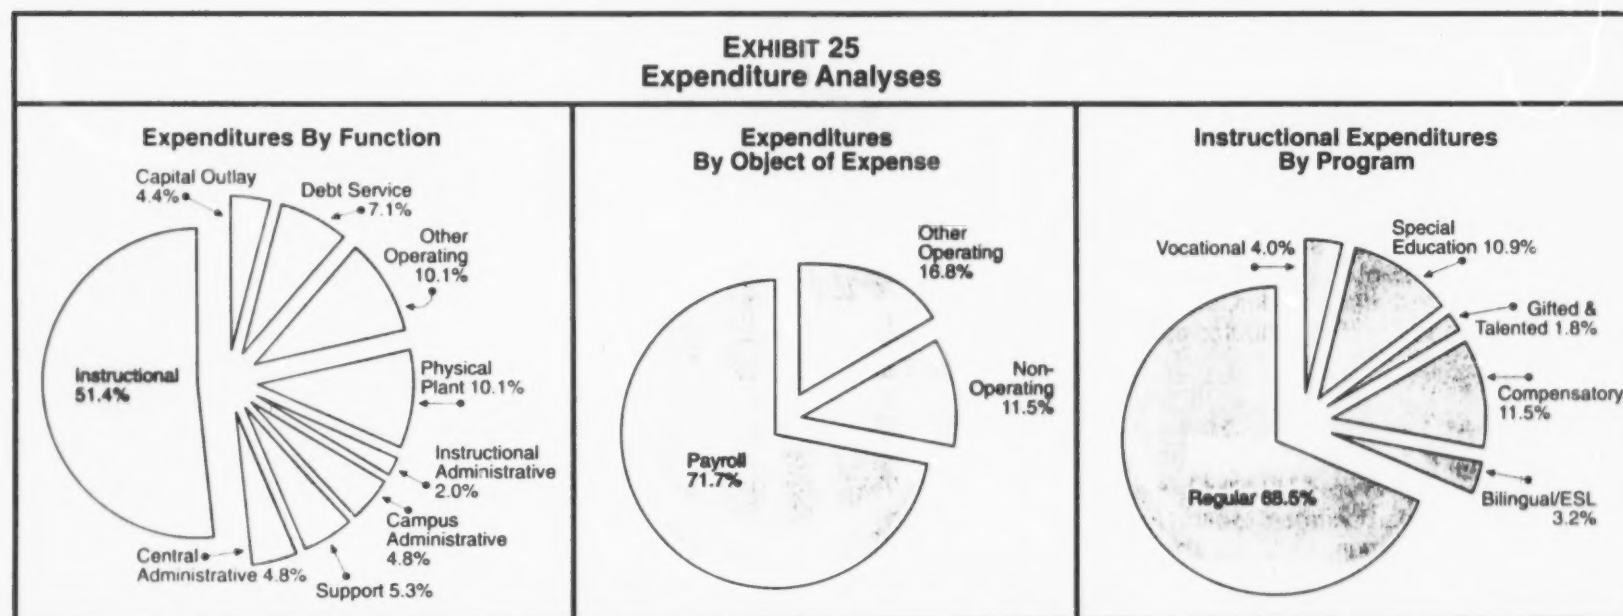

In 1992-93, local school district budgeted expenditures totalled \$16.9 billion, an increase of 9.6 percent over 1991-92. This amounts to \$4,774 per pupil, compared with \$4,452 in 1991-92.

**Expenditures by Function.** Expenditures for instruction accounted for over half (51.4 percent) of all budgeted funds. These costs include all activities dealing directly with the instruction of pupils, including teacher and educational aide salaries, instruction through the use of computers, and classroom equipment purchases.

Other major expenditures by function are for support services which include libraries and pupil services, 5.3 percent; administration, 11.6 percent; and plant services, 10.1 percent.

**Expenditures by Program.** Instructional expenditures are also categorized by program. In 1992-93, \$8.7 billion was budgeted for instructional expenditures. The majority of these funds, 68.5 percent, is spent on the regular program. The remainder is spent for special education, 10.9 percent; compensatory education, 11.5 percent; vocational

**EXHIBIT 25**  
**Expenditure Analyses**

Expenditures by function and object depict total expenditures budgeted by districts for 1992-93. The third pie chart, instructional expenditures by program, is a more detailed analysis of the "instructional" function portion (51.4 percent) of the first pie chart.

education, 4.0 percent; bilingual education / English as a second language programs, 3.2 percent; and gifted and talented education, 1.8 percent.

**Expenditures by Object.** By object of expense, payroll represents 71.7 percent of all school district expenditures. Expenditures under "other operating" which include purchased and contracted services, and supplies and materials, account for an additional 16.8 percent of the budget. Debt service and capital outlay, both non-operating categories, make up the remaining 11.5 percent.

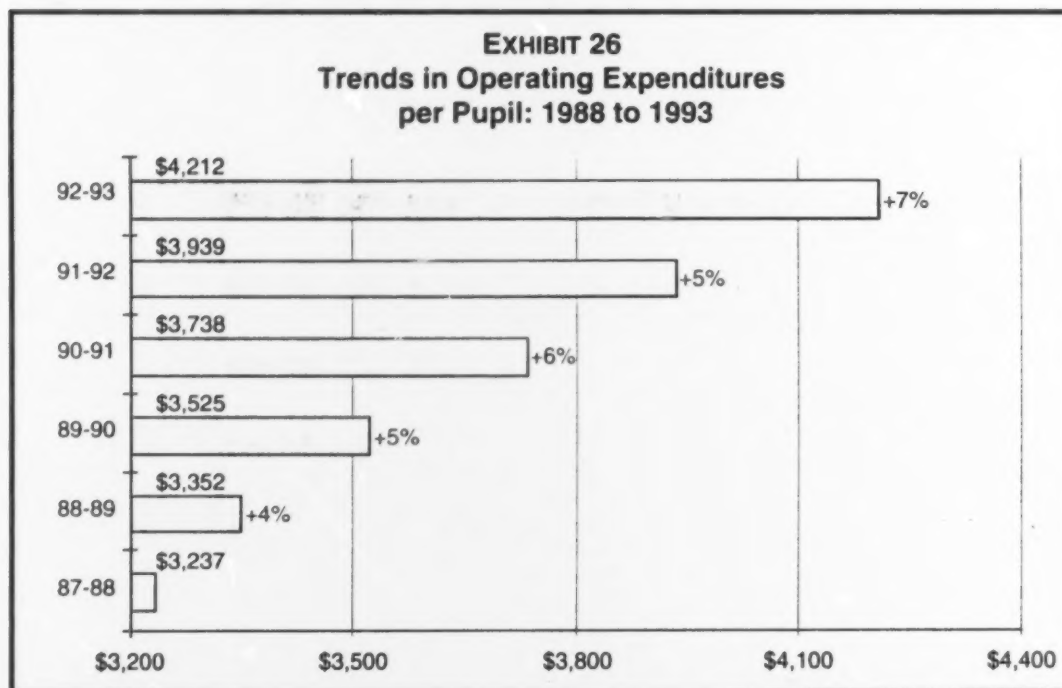

School district object expenditures are divided into current operating and non-operating categories. Current operating expenditures are all salaries, services and supplies. Non-operating expenditures include the construction or remodeling of facilities, and the repayment of debt. *Exhibit 26* depicts the increases in per pupil operating expenditures that have occurred since 1987-88. Payroll accounts for 81.3 percent of current operating expenditures and includes salaries, wages, and employee benefits for school district employees.

## Exclusion of Funds

Some funds have been excluded from the figures presented in this document to allow for greater comparability among districts. These funds are associated with districts involved in cooperatives and capital projects.

**Cooperatives.** Some districts participate in cooperative arrangements with other districts. The fiscal agent or manager of the cooperative may be another district, an ESC, or a county. One of the most common types of cooperatives is a special education cooperative, where special education services are shared among member districts. An indicator is shown in the *District Detail* for each district that participates in, or is a fiscal agent of, a special education cooperative. These dis-

tricts may have per pupil expenditure amounts that differ from expectations because students served through the fiscal agent are not necessarily enrolled in the fiscal agent district. To correct for this problem, any amounts budgeted in fund group 80, fiduciary fund types, have been excluded from the *District Detail* figures presented in this document. Total revenues and expenditures reported in fund group 80 are approximately \$90.4 million and \$110 million, respectively.

Budgeted operating expenditures per student have increased 30 percent since 1987-88. Percentages shown represent year-to-year change.

**Capital Projects Fund/Facilities.** Fund 60, where all capital projects are accounted for, has also been excluded to allow for better comparability between districts.

In response to increasing enrollments, school districts have consistently increased indebtedness to expand facilities, and debt service payments have risen as a result. For the 1991-92 school year, the last year for which data are available, total school district debt

was approximately \$8.6 billion, compared to \$5.0 billion 10 years ago.

During the past three years, school districts have been spending approximately \$1 billion annually to meet their debt service obligations for principal and interest. For the 1992-93 school year, districts reported they anticipated collecting \$1.1 billion in debt service tax revenues. Debt service payments are bud-

geted to be \$1.2 billion, or 7.1 percent of all school district expenditures, excluding capital outlay.

Nearly 69 percent of all school districts have debt service payments. Among these districts, the average effective debt service tax rate is \$0.18. Districts with the highest debt service tax rates are among the poorest in property value per pupil.

# Detailed Statistics

Extensive information about students, student performance, district staff, and district finances for 1992-93 follows. Group summary tables and distribution tables are presented on pages 32 through 55, followed by individual school district level data beginning on page 56.

## Category Descriptions

Items are summarized by district size, community type, property wealth, total effective tax rate, and ESC region. A description of each of these summary groups is provided below:

### Enrollment Groupings

Districts are grouped into nine size categories according to their total student enrollment for the year. Districts of similar size are grouped together.

### Community Type

Districts are classified on a scale ranging from major urban to rural. Factors such as size, growth rates, and proximity to an urban area are used to determine the appropriate group. The groups are:

*Major Urban.* Ten school districts in the metropolitan areas of Houston, Dallas, San Antonio, Fort Worth, Austin, Corpus Christi, and El Paso. Within

each metropolitan area, these districts are the largest.

*Major Suburban.* Other school districts in and around the major urban areas.

*Other Central City.* The major school districts in other large Texas cities.

*Other Central City Suburban.* Other school districts in and around the other large, but not major, Texas cities.

*Independent Town.* The largest school districts in the counties with populations of 25,000 to 100,000.

*Non-Metro: Fast Growing.* The school districts not in any of the above categories and that exhibit a five-year growth rate of at least 20 percent. These districts must have a population of at least 300 students.

*Non-Metro: Stable.* The school districts not in any of the above categories, yet have a student population that exceeds the state median.

*Rural.* The school districts that do not meet the above tests for placement into a category. These districts have enrollment between 300 and the state median and a growth rate less than 20 percent, or they have enrollment less than 300.

## Total Effective Tax Rates

Districts are grouped into four categories, or quartiles, with approximately equal numbers of districts in each. The category shows the total effective tax rate, which is the sum of the school district maintenance and operation and debt service effective tax rates plus the county education (CED) effective rate. The components of this total rate are calculated by dividing the 1992 levies by the 1992 comptroller's taxable value. The six special statutory districts do not levy property taxes.

## Property Wealth

Wealth is defined as total taxable property value per student enrolled and is used as an indicator of a district's ability to raise local funds. The property value used is 1992 taxable value as determined by the Comptroller's Property Tax Division (CPTD). Districts are classified into 20 categories with approximately equal numbers of students in each, or approximately five percent of total enrollment per category. The six special statutory districts form the 21st group because they have no taxable property wealth.

## Education Service Center Regions

The state is divided into 20 geographic regions, each served by an Education Service Center. The number of districts assigned to each ESC region varies.

## Distribution Statistics

This information is presented to help readers better understand the distribution of values of a particular item among Texas public school districts. By examining the variance between the high, low, and intermediate values, it is possible to determine whether districts have similar characteristics, as in the case of pupil to teacher ratios, or very different characteristics, as in the case of the number of students enrolled.

Each item is analyzed independently: the district with the highest value for one item is not necessarily the district with the highest value for other items. The terms used are defined below:

**Lowest (Highest) Value.** For any given item, the lowest (highest) value found among all the districts.

**XXth Percentile.** For any given item, a value at the point in the distribution where XX percent of the school districts are below the value. For example, the 10th percentile means that 10 percent of the school districts have values lower than the value shown.

**Median.** For any given item, the value at the point in the distribution where half of the school districts are below the value, and half are above.

**State of Texas.** For most items this is the sum of all the reported district values. For ratios or percent calculations, the state total is computed as the sum of all the numerators, divided by the sum of all the denominators. For these items, the state statistic is a weighted state average.

## District Detail

The information for school districts is sequenced such that all 88 data items are presented in a six page layout for approximately 24 districts at a time. The 88 items pertain to students, student performance, district staff, and district finances.

Districts are sequenced alphabetically within counties. Counties are numbered and are also arranged alphabetically. To locate a particular district by name, see the *District Listing* in the appendix. This listing provides the county and county number needed to find a district in the *District Detail* section. As with the grouped reports (size, type, tax effort, wealth, ESC regions) and *Distribution Statistics*, a state summary line concludes the *District Detail*.

Definitions of the 88 data items begin on page 290.
